NORTHERN STATES POWER COMPANY

MINNEAPOLIS, MINNESOTA 55401

March 1, 1976

Mr Victor Stello, Director
Division of Operating Reactors
U S Nuclear Regulatory Commission
Washington, DC 20555

Dear Mr Stello:

MONTICELLO NUCLEAR GENERATING PLANT
Docket No. 50-263 License No. DPR-22

Establishment of Drywell-Torus Pressure Differential

In accordance with discussions with the NRR staff on February 26, 1976, Northern States Power Company will initiate measures to enhance the safety margins for the Monticello Plant Mark I Containment System by establishment of a differential pressure of at least 1 psi between the drywell atmosphere and the torus when the unit is in operation.

The Monticello Plant has been out of service since February 19, 1976 for maintenance. Access for inspection and maintenance has precluded establishment of containment and inerting conditions to operationally demonstrate the proposed measures. These procedures will be initiated when the required containment and inerting conditions have been established for unit restart, which is expected to take place later today. We will continue to maintain the 1 psi drywell-torus differential by these interim operating procedures until other appropriate measures have been instituted.

Yours very truly,
