MONTICELLO NUCLEAR GENERATING PLANT
Docket No. 50-263 License No. DPR-22

License Amendment Request Dated March 31, 1989
Regulatory Guide 1.99, Revision 2, and Miscellaneous Changes

Attached is a request for a change in the Technical Specifications, Appendix A of the Operating License, for the Monticello Nuclear Generating Plant. This request is submitted in accordance with the provisions of 10 CFR Part 50, Section 50.90.

This request proposes changes in three areas:

- a. Revised pressure-temperature limit curves to meet the requirements of Regulatory Guide 1.99, Revision 2, "Radiation Embrittlement of Reactor Vessel Materials." The proposed changes are submitted in response to NRC Generic Letter 88-11.
- b. A new requirement for augmented inspection of piping susceptible to intergranular stress corrosion cracking (IGSCC) as required by NRC Generic Letter 88-01.
- c. A change in the requirements for Type A containment leakage rate tests to permit the use of the "mass point" method as approved by the Commission in a recent change to 10 CFR Part 50, Appendix J.

Exhibit A contains a description of the proposed changes, the reasons for requesting the changes, and a Significant Hazards Determination. Exhibit B contains pages of the Monticello Technical Specifications revised to show the proposed changes. Retyped pages are included in Exhibit C.

General Electric has prepared a report which supports the proposed changes in the Monticello pressure-temperature limitation curves. A copy of this report, SASR 88-99, Revision 1, January, 1989, is attached as Exhibit D.
