Information Related to NUREG-0737, Item II.K.3.13,  
Implementation of RCIC Automatic Restart

In a letter dated March 16, 1983 from D B Vassallo, Chief Operating Reactors Branch #2, Division of Licensing, USNRC, we were requested to verify compliance with NRC staff acceptance criteria for NUREG-0737, Item II.K.3.13, and provide an implementation schedule. The following information is provided in response to Mr Vassallo's letter:

Item 1

The RCIC system will be modified to relocate the existing logic for the high reactor vessel water level trip from the RCIC turbine trip valve to the steam supply valve to permit subsequent auto restart of the RCIC system on low water level. This change will be consistent with actions identified in the BWR Owner's Group proposed modification.

Item 2

The modification to the RCIC system will be designed and implemented using standards consistent with the original system design.

Item 3

The RCIC system at Monticello is classified as a safety related system and therefore the quality requirements of Appendix B to 10 CFR Part 50 will be adhered to.

SCHEDULE

Installation of the RCIC Automatic Restart modification will be completed during the 1984 refueling outage currently scheduled to commence about February 1, 1984.

Please contact us if you have any questions related to the information we have provided.
