Docket No. 50-263 License No. DPR-22

Revision 1 to Final Report on Analyses of Capsule
from Reactor Vessel Radiation Surveillance Program

On June 5, 1984 we submitted for NRC Staff review a report entitled, "Final Report on Examination, Testing, and Evaluation of Irradiated Pressure Vessel Surveillance Specimens from the Monticello Nuclear Generating Plant", March 15, 1984. Subsequent to this submittal several errors were noted in the subject report and a revision was issued by Battelle Columbus Laboratories. Forty copies of the revised report, dated November 5, 1984, are submitted with this letter for NRC Staff review.

To aid the Staff review a list of the revisions has been included with the report. The corrections to the report include several typographical errors, however, most of the corrections were as a result of revised specimen identification numbers of three Charpy and five tensile specimens by the General Electric Company. It should be noted that these changes can be considered editorial, except for the minor corrections of the Charpy (irradiated weld and HAZ metal) 30, and 50 ft-lb levels, 35 mill lateral expansion, and upper shelf energies. However, none of the corrections change the final results or previous conclusions.

Please contact us if you have any questions related to the attached report.
