Reactor Containment Building
Integrated Leak Rate Test Report

Attached, for the information of the NRC Staff, is a summary technical report describing the integrated containment leakage test conducted at the Monticello Nuclear Generating Plant at the conclusion of the last refueling outage.

This report is being submitted to meet the requirements of 10 CFR Part 50, Appendix J, Section V.B.1. This section requires the Reactor Containment Building Integrated Leak Rate to be the subject of a summary technical report submitted to the Commission approximately three months after the conduct of the test. The subject test was completed in October, 1989. Due to an oversight the report was not completed until April, 1990. The plant Integrated Leak Rate Test Procedure will be revised to require the plant to notify the Nuclear Support Services Department upon completion of the test. This will ensure timely submittal of future reports.

Please contact us if you have any questions related to the attached report.
