Subject: NECR -- closed sites list

Yolande, thank you for the very helpful discussion this morning. The list of sites that we have been looking at that are or are about to be closed are: (1) Ambrosia Lake (Philips Mill), closed since 1995; (2) Ambrosia Lake (Rio Algom); major disposal cell closed and 2 acre cell remaining to be closed, anticipated to be fully closed in 2011; (3) Shiprock -- closed since 2003 (this one is in Navajo/Hopi); (4) Bluwater and LBAR -- closed; I don't have the date right now. The other sites that have been mentioned are Homestake and MOAB. We understand that Homestake will not be closed until 2013 and 2017 (different cells apparently) but has off-site groundwater issues, so would not be eligible under our regs, and MOAB apparently was expressly reserved to the Moab Mill Site remediation and is not available for other uses. Any information you or Ms. Stokes can provide about the availability of closed sites generally to receive mine wastes, under NRC/DOE regs, guidance or policy, would be helpful to our availability to respond to the public, as we discussed. I will be glad to coordinate with R6 if you will let me know who your contact is there. Thanks again!
