## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Initialize previously stored IC# 141 (FATHER/Exam) developed for this JPM (Exam 3 directory).
2. ***ENSURE tags on FWV-15, FWV-23 and FWP-2B Trip/Reset switch.***
3. Freeze the simulator and notify the examiner.  
OR  
If creating IC perform the following:

- a. Reduce power per OP-204 and stabilize power at 45% with:
  - Unit buses transferred to the Startup Transformer per OP-703.
  - “B” Condensate Pump secured.
  - “B” MFW Pump secured with FWVs 15 and 23 closed
- b. Ensure power is less than or equal to 45%
- c. Insert the following failures:

|                 |  |
|-----------------|--|
| TFL4APB2 = TRUE | “A” RPS channel high pressure bistable = no trip |
| TFL4CPB2 = TRUE | “B” RPS channel high pressure bistable = no trip |
| TFL4DPB2 = TRUE | “C” RPS channel high pressure bistable = no trip |
| TFL9DSSA = TRUE | DSS “A” fail to trip                             |
| TFL9DSSB = TRUE | DSS “B” fail to trip                             |
| ALA1483 = FALSE | Nuisance alarm                                   |

[INSTRUCTOR NOTE: The fault below fails the “A” Tc instrument low ramped over 3 minutes.]

- d. Freeze simulator
  - Insert failure: RC5A TE1 fails LOW (TVL14145 - constant offset) failed to “-0.4” ramped over 3 minutes.
- e. Store IC

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Discuss with examiner for length of time following ‘taking of the watch’ to insert failure.
2. Ensure TVL14145 failure is pending at “-0.4” on “Pending” tab on the Summary page.
3. Plant response after 45 seconds:  
Main feedwater flow will lower on “A” and rise on “B”. CRDs will receive an out command. Power will rise. RCS pressure will slowly rise and accelerate if no corrective actions are taken. Reactor will trip on high pressure if control rod movement is not stopped. Feedwater will need to be adjusted to null out delta Tc.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. AP-504, Rev 12, Integrated Control System Failure

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the reactor operator.

Rx power is 45%.

Power reduced to work on Main Feedwater Pump 2B governor.

Main Feedwater Pump 2B is secured and tagged out.

#### **INITIATING CUE:**

You are to monitor plant parameters and respond to plant conditions IAW the duties and responsibilities of the Operator at the Controls.

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Initialize previously stored IC# 142 (FATHER/Exam) developed for this JPM.
2. Freeze the simulator and notify the examiner.

OR

1. Initialize the simulator to a 100% power IC.
2. Fail MUV-73 closed. (TFBVC073 = TRUE)
3. Place condition on MUV-73 to remove failure when MUV-73 control switch taken to open. (TFBVC073 = DELETE conditional on A1\_A2\_S19\_3)
4. Fail MUV-586 closed. (TFBVC586 = TRUE)
5. Place condition on MUV-586 to remove failure when MUV-586 control switch taken to open. (TFBVC586 = DELETE conditional on A1\_A2\_S268\_3)
6. Open breaker ("B" train power supply) for MUV-25 (TCB2V25B = F).
7. Open breaker ("B" train power supply) for MUV-26 (TCB2V26B = F).
8. Insert a 0.01 LOCA at the discharge of RCP-1A (TVHH0401 = 0.01).
9. Perform EOP-13, Rule 1.
10. Run until RCS pressure is approx. 1000 psig.
11. Acknowledge all annunciator alarms and loss of ASCM alarms.
12. Silence all nuisance alarms not associated with the JPM. (Alarm points: 0255, 1419, 1463, 1613, 1615, 1620, 1670, 961, 1235, 1112, 101, 103, 089 and 761 should be defeated in addition to FW Heater Drain Alarms)
13. Freeze the simulator.
14. Store IC.

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Unfreeze the simulator when directed by examiner.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Consumable copies of EOP-03 signed off through Step 3.2.

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

A LOCA has occurred.

EOP-02, Vital System Status Verification, Immediate Actions were performed.

The crew has transitioned to EOP-03, Inadequate Subcooling Margin.

EOP-03 Immediate Actions and EOP-13, Rule 1, actions were performed.

EOP-03 Follow-Up Actions Steps 3.1 and 3.2 are complete.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to perform EOP-03 starting with Step 3.3.

**(TO BE RETURNED TO THE EXAMINER UPON COMPLETION OF TASK)**

**INITIAL CONDITIONS:**

You are the Reactor Operator.

A LOCA has occurred.

EOP-02, Vital System Status Verification, Immediate Actions were performed.

The crew has transitioned to EOP-03, Inadequate Subcooling Margin.

EOP-03 Immediate Actions and EOP-13, Rule 1, actions were performed.

EOP-03 Follow-Up Actions Steps 3.1 and 3.2 are complete.

**INITIATING CUE:**

The Control Room Supervisor has directed you to perform EOP-03 starting with Step 3.3.

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Initialize previously stored IC# 143 (FATHER/EXAM) developed for this JPM. (Exam 3 directory)

OR

1. Establish steady state 3% power conditions
2. Disable and acknowledge LEFM and Nozzle Quality alerts.
3. Insert the following failures
  - a. RCV-13 fail to position      TVHV0131 = 0.05      COND ON A3\_A2\_DS53\_1
  - b. RCV-14 run open              TFHV0143 = True      COND ON A3\_A2\_S27\_3
  - c. RPS Channel "A" low pressure trip disable      TFL4APB5 = TRUE
  - d. RPS Channel "B" low pressure trip disable      TFL4BPB5 = TRUE
  - e. RPS Channel "C" low pressure trip disable      TFL4CPB5 = TRUE
4. Freeze the simulator and notify the examiner.

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Unfreeze the simulator when directed by examiner.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Consumable copies of OP-305 with steps 4.9.1 and 4.9.2 signed off.
2. Consumable copies of AP-520.

***To more efficiently use simulator time candidates may review the cue sheet and OP-305 prior to entering the simulator.***

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

The plant is in Mode 2.

RCS boron concentration is 1400 ppm.

PZR boron concentration is 1510 ppm.

A pre-job briefing has been completed and Reactivity Manager oversight will be provided by the examiner. A less than 1% power change is anticipated for this evolution.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to perform a boron equalization per Section 4.9 of OP-305, Operation of the Pressurizer. Steps 4.9.1 and 4.9.2 have already been completed.

Expected duration of boron equalization is 8 hours.

Maintain RCS pressure between 2120 psig and 2180 psig.

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Restore simulator to IC# 145 (FATHER/Exam) developed for this JPM.  
(Exam 3 directory)
2. If creating IC then perform the following:
  - a. A LOCA is in progress (RC-002C\_TVHH0303 = 0.005)
  - b. Reactor Building pressure is < 30 psig.
  - c. BSP-1A will not start in manual (BS-001A\_TFB60201 = True)
  - d. The BWST level is > 20 ft
  - e. Use EOP-03 for setup conditions
  - f. Execute EOP-14 Enclosures 1 & 2
  - g. Acknowledge SCM alarm
  - h. Check CRTs to ensure RB temperatures are high
  - i. Insert BSV-4 auto flow control failure (A1\_A2\_A8\_6 = 0.1, conditional on H\_A1\_A2\_DS809\_1, ramped over 2 minutes)
  - j. Insert BSV-4 control Local/Remote setpoint (A1\_A2\_A8\_5 = False, conditional on H\_A1\_A2\_DS809\_1)
  - k. Disable the following event points: 0111, 0112, 0119 & 0120

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Booth operator will take the roles of the various operators for notifications.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Consumable copies of EM-225C, Rev 5, completed through Step 4.5.

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

A LOCA is in progress.

The Control Room Supervisor has entered EOP-03.

Reactor Building (RB) temperatures are high.

The Emergency Coordinator (EC) has given concurrence to start Building Spray to reduce RB temperatures.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to start Building Spray (BSP-1A preferred) per EM-225C Step 4.6.

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Initialize previously stored IC# 146 (FATHER/Exam) developed for this JPM.  
(Exam 3 directory)
2. Freeze the simulator and notify the examiner.

OR

If creating IC perform the following:

1. Insert LOOP
2. Delete LOOP after plant trips
3. Perform AP-770 up to Step 3.61 (restoring a bus)
4. Close breakers 4900 and 4902
5. Disable nuisance alarm (EP 0947, 1079, 1372, 1442, 1371, 1592, 1623)
6. Breaker 1691 fail "as is"                      TFP8X91A = TRUE
7. Breaker 1692 fail "as is"                      TFP8X92A = TRUE
8. Store IC

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Be prepared to complete portions of Step 6.1 of Enclosure 6 in AP-770 as PPO (adjusting speed droop from 0 to 60 in increments of 10 and selecting unit-parallel switch to parallel).

Page "EDG"

Speed Droop (TAGDADRP)

Unit / Parallel Switch (TCG5AUPS)

2. Be prepared to complete portions of Step 6.4 of Enclosure 6 in AP-770 as PPO (adjusting speed droop from 60 to 0 in increments of 10 and selecting unit-parallel switch to unit).

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Radio (may be simulated)
2. Consumable copies of AP-770, Enclosure 6

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

The plant is stable in Mode 3 following a loss of off-site power.

Both diesels are running and tied to their respective ES bus.

AP-770, Emergency Diesel Generator Actuation, is in progress and completed through Step 3.61.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to perform AP-770, Enclosure 6, "A ES DIESEL SHUTDOWN".

SIMULATOR JOB PERFORMANCE MEASURE

Ensure plant conditions are stable.</li> <li>2. Ensure HPI is bypassed or reset.</li> <li>3. Notify PPO to obtain key 94 from Control Room.</li> <li>4. <b><u>IF</u></b> A ES 4160V bus will be connected to the BEST XFMR,<br/><b><u>THEN</u></b> ensure Bkr 3237 is open.</li> <li>5. Depress "4160V ESA UV RESET" push button. <b>(CS)</b></li> <li>6. Select "EDG A EXC VOLT ADJ SELECT" to "CONT RM". <b>(CS)</b></li> <li>7. Maintain voltage at 4160V (4150 to 4200V) using "EDG A EXC VOLT ADJUST".</li> <li>8. Maintain frequency at 60 Hz (59.9 to 60.1 Hz) using "EDG A SPEED".</li> <li>9. Notify PPO to select A ES Diesel "SPEED DROOP" to "60" in increments of 10 (119 ft AB A ES Diesel Engine Room).</li> <li>10. Notify PPO to select "A EDG Unit-Parallel" switch to "PAR" (119 ft AB A ES Diesel Control Room).</li> <li>11. Ensure at least 1 of the following breakers is closed:             <ul style="list-style-type: none"> <li>___ 1691</li> <li>___ 1692</li> <li>___ 4900</li> <li>___ 4902</li> </ul> </li> </ol> | <p><b>Critical Step (CS)</b></p> <p><b>Basis: Generator electrical alignment to share load.</b></p> <p>SAT _____</p> <p>UNSAT _____</p> |

## SIMULATOR JOB PERFORMANCE MEASURE

### STANDARD:

Candidate verifies plant stable (information also supplied in cue).

Candidate verifies on both "A" and "B" ES status panels that the channel function enable green light is on and the bypass reset green light is on.

Candidate notifies PPO to obtain key 94 from the Control Room.

Candidate N/As Detail 4 since the A ES 4160V bus will be connected to the OPT.

Candidate depresses the "4160V ESA UV RESET" push button and verifies that both reset/normal lights are on.

Candidate rotates "EDG A EXC VOLT ADJ SELECT" switch to "CONT RM" (Q-02-05 alarms).

Candidate rotates the "EDG A EXC VOLT ADJUST" knob to maintain voltage between 4150 and 4200 volts.

Candidate rotates the "EDG A SPEED" control handle to maintain frequency between 59.9 and 60.1 Hz.

Candidate notifies the PPO to complete Details 9 and 10 of Step 6.1 of Enclosure 6 in AP-770.

Candidate verifies that breakers 4900 and 4902 are closed.

### EXAMINER CUE:

**Inform candidate that the PPO has obtained key 94 from the Control Room.**

### EXAMINER / BOOTH OPERATOR CUE:

**When notified as the PPO to adjust Speed Droop then adjust Speed Droop as directed and report back to the candidate as the PPO.**

**When notified as the PPO to select Unit Parallel switch to PAR then select Unit Parallel switch to PAR as directed and report back to the candidate as the PPO.**

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. “Restore” the simulator to IC# 147 (FATHER/Exam) developed for this JPM.  
(Exam 3 directory)
2. Execute lesson plan Sim G – NRC 2011.

OR

1. Restore the simulator to a 75% MOL IC.
2. Secure CWP-1C and ensure Waterbox delta T < 25 degrees.
3. Secure ARP-2B.
4. Disable nuisance alarms:
  - EP 1116 (LA ALA1116 to False)      AULD Trouble
  - EP 0094 (LA ALA0094 to False)      Hotwell B level high
  - EP 0098 (LA ALA0098 to False)      CDV-88
  - EP 1914 (LA ALA1914 to False)      Computer
5. TVKK1CFR = 0.35, ramped for 2 minutes, conditional on H\_A4\_A2\_DS121\_1  
TVKK1CFR = 0.7, delay 4 min, ramped for 1 minute, conditional on H\_A4\_A2\_DS121\_1  
ALA0129 = TRUE, 90 second delay, conditional on H\_A4\_A2\_DS121\_1  
ALA0129 = DELETE, conditional on H\_A4\_A2\_DS120\_1

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Select CW-24 to “ENABLE” as directed by OP-604, Section 9.9.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Consumable copies of OP-604, Rev 73, Section 9.9 with Steps 9.9.1 through 9.9.3 signed off.

***To more efficiently use simulator time candidates may review the cue sheet and OP-604 prior to entering the simulator.***

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

CWP-1C has been secured for 4 hours due to maintenance.

CWP-1C maintenance is now complete.

A SPO is standing by at the Intake Structure for CWP-1C start.

An in-plant SPO is controlling Hotwell level in manual.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to start CWP-1C IAW OP-604, Section 9.9. Steps 9.9.1 through 9.9.3 have already been completed.

## SIMULATOR JOB PERFORMANCE MEASURE

### **SIMULATOR SETUP INSTRUCTIONS:**

1. Initialize previously stored IC# 148 (FATHER/Exam) developed for this JPM. (Exam 3 directory)

OR

1. Initialize 100% IC.
2. Insert the following malfunctions:
  - AHF-30 fail to trip (TFC7030R = True)
  - AHF-30 released when switch is taken to Trip (TFC7030R = Delete, conditional on A7\_A1\_S56\_1)
  - AHF-11B fail to trip (TFC711BR = True)
  - AHF-11B released when switch is taken to Trip (TFC711BR = Delete, conditional on A7\_A1\_S29\_1)
  - TVCMXA02 = 3.5 (activity multiplier)
  - Elevate release radiation levels in A & B WGDTs to maximum
  - Maximize leak size and open relief valves on both tanks
3. Unfreeze the simulator and allow to run until RM-A2 reaches its High Alarm setpoint (about 2 minutes).
4. Freeze the simulator and notify lead examiner.

### **SIMULATOR OPERATOR INSTRUCTIONS:**

1. Unfreeze the simulator when directed by examiner.

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Consumable copies of AP-250, Rev 19

## SIMULATOR JOB PERFORMANCE MEASURE

### **READ TO THE OPERATOR**

#### **INITIAL CONDITIONS:**

You are the Reactor Operator.

The plant is at 100% power.

RM-A2 Gas “Atmospheric Radiation High” alarm has just been received.

AP-250, Radiation Monitor Actuation, has been entered.

#### **INITIATING CUE:**

The Control Room Supervisor has directed you to perform AP-250 starting at Step 3.1.

SIMULATOR JOB PERFORMANCE MEASURE

**CANDIDATE CUE SHEET**

**(TO BE RETURNED TO THE EXAMINER UPON COMPLETION OF TASK)**

**INITIAL CONDITIONS:**

You are the Reactor Operator.

The plant is at 100% power.

RM-A2 Gas “Atmospheric Radiation High” alarm has just been received.

AP-250, Radiation Monitor Actuation, has been entered.

**INITIATING CUE:**

The Control Room Supervisor has directed you to perform AP-250 starting at Step 3.1.

# CRYSTAL RIVER UNIT 3 JPM COVER SHEET

## PLANT JPM I

NRC 2011

### SAFETY FUNCTION 3

## RESPOND TO A CORE FLOOD TANK LOW PRESSURE CONDITION

PREPARED/REVIEWED BY: Alan Kennedy Date: 05-31-11

VALIDATED BY: Bryan Wooten / Brandon Webster Date: 07-08-11

APPROVAL BY: Mark VanSicklen Date: 07-27-11  
(Nuclear Training Supervisor)

CONCURRED BY: Mike Kelly Date: 07/28/11  
(Operations Representative)

Validation is not required for minor enhancements, procedure revisions that do not affect the JPM, or individual step changes that do not affect the flow of the JPM.

Operations concurrence is required for new JPMs and changes that affect the flow, critical steps or time critical steps of the JPM. Operations concurrence is not required for changes that are required due to a procedure revision.

## PLANT JOB PERFORMANCE MEASURE

### **TOOLS / EQUIPMENT / PROCEDURES NEEDED:**

1. Required PPE
2. Consumable copies of OP-412A, Rev. 26, Section 4.4

### **READ TO THE OPERATOR**

### **INITIAL CONDITIONS:**

You are the Primary Plant Operator.

### **INITIATING CUE:**

You are directed to perform a waste gas release of WGDT-1A, to the containment building, in accordance with OP-412A, Section 4.4.

Lower WGDT-1A pressure to 10 psig.

PLANT JOB PERFORMANCE MEASURE

**EXAMINER'S NOTE: FOR STEPS DENOTED AS "CRITICAL STEP", WHICH HAVE MULTIPLE ACTIONS, THE INDIVIDUAL REQUIRED ACTION WILL BE DENOTED "CS". IF NO INDIVIDUAL ACTIONS ARE DENOTED AS SUCH THEN ALL ACTIONS WITHIN THE STEP ARE DEEMED "CRITICAL".**
