5

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now. It's Nuking FUT\$!

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

The NRC needs to act as a vigilant watchdog for public safety and health, not as lapdog for the nuclear industry. Far too often the close nature of regulators to industry has created conflict and dysfunction. We can not afford to have the NRC either in the pocket of those they regulate, or asleep at the wheel.

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is completely unacceptable.

Specifically, the NRC's draft Strategic Plan for 2012-2016 says (on page 5) that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

NOT SO!--the purpose of NRC regulations is to protect the public health and safety.

This is not just semantics: if the purpose of NRC regulation were to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? Also, given this language, if the NRC ever did try to do that, wouldn't a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For far too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

While the NRC drags its feet implementing needed post-Fukushima safety modifications, it moves ahead with attempts to redefine the very principles of nuclear regulation. This does not serve the American people.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations as to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations should be to protect the public health and safety.

This means more than just semantics, If the purpose of NRC regulation would be to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? Given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government placed the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this meant favoring nuclear utilities ahead of people. This must stop. Now.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

I have been informed that, despite the Fukushima disaster, the Nuclear Regulatory Commission is attempting to redefine the very principles of nuclear regulation.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

However, as you know, the purpose of NRC regulations is to protect the public health and safety.

If the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever tried to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

I believe that for too long, the U.S. government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. Please do everything in your power to change this NOW! Thank you.

The NRC is by law not an enabler but a regulator of the nuclear industry. So, please, regulate! My wife and I are therefore in total agreement with the text below.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Sincerely
Mary Jane Adams and Klaus Schumann

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Actually, the purpose of NRC regulations is to protect the public health and safety, not to "enable" the use of radioactive materials and nuclear fuels.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

I am part of that 99% that is frustrated and fed up with political favors to corporations. So I have to ask: What's with the attempt to redefine the principles of nuclear regulation to make it easier on the corporations and riskier for the citizens?

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety. For example, the NRC should implement necessary post-Fukushima safety modifications.

If the purpose of NRC regulation was to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Nuclear power is highly dangerous: from the mining, to the processing, to the generation of power, and to the disposal of waste. NRC's regulations are to protect public health and safety not to enable the use of radioactive materials and nuclear fuels.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on Nuclear Regulatory Commission NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

It was most distressing to learn today that the Nuclear Regulatory Commission (NRC) is seeking to change its mission from protecting the public health and safety to enabling the use of radioactive materials. How much have nuclear industry lobbyists been paying off members of the NRC? Please stop the NRC from making such a change in its mission. Please also make it implement needed post-Fukushima safety modifications to reactors and improvements to monitoring, control, and emergency response processes.

Time is of the essence because the NRC is moving ahead with attempts to redefine the very principles of nuclear regulation. Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels. This is unacceptable. The purpose of NRC regulations must remain "to protect the public health and safety."

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

I am writing, this time, because it seems to me that the NRC is dragging its feet implementing needed post-Fukushima safety modifications, while moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this means putting nuclear utilities ahead of people, and it needs to stop now. Protecting the health and well-being of our people, our communities, and our ecosystems should be the top priority.

Thank you for your time and consideration.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

Specifically, in its draft Strategic Plan for 2012-2016, the Nuclear Regulatory Commission says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Given this new language, if the NRC ever did try to shut down an unsafe nuclear reactor, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to PROTECT the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

As a very concerned American citizen and taxpayer I appreciate your considering my comments, below:

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is absolutely unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

The NRC needs to implement much needed post-Fukushima safety modifications. The NRC also needs to stop efforts to redefine the very principles of nuclear regulation.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels. This seems to be an attempt to add something new that is unacceptable. The stated purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Subject: Comment on NUREG-1614, Vol. 5, draft

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.

Categories: Strategic Plan

While the NRC is dragging its feet implementing needed post-Fukushima safety modifications, it is moving ahead with attempts to redefine the very principles of nuclear regulation. This is unacceptable.

Specifically, in its draft Strategic Plan for 2012-2016, the NRC says, on page 5, that the purpose of its regulations is to "enable" the use of radioactive materials and nuclear fuels.

Actually, the purpose of NRC regulations is to protect the public health and safety.

This is more than just semantics: if the purpose of NRC regulation is to enable use of nuclear power, then how could the agency ever shut down a nuclear reactor, no matter how dangerous it might be? And given this language, if the NRC ever did try to do that, would a utility be able to sue the agency for preventing, rather than enabling, a reactor's operation?

For too long, the government has been putting the interests and profits of large corporations ahead of the public's interest. In the NRC's case, this has meant putting nuclear utilities ahead of people. This must stop. Now.
