Hello Cassandra,

Since we last spoke I have been locating documents related to the use history of the facility associated with SNM-256 and results of the leak testing that was performed prior to shipping the Pu-Be sources in 1996 and subsequently removed from that license. I have also identified a person on campus with a liquid scintillation counter who can analyze wipes for me. I will be performing the wipe tests at various locations within the facility and the storage safe and will submit the results keyed to a diagram. I will also submit a use history for the facility and other information you requested. I would say this will probably begin early next year after the holiday semester break. Let me know if you need any additional information and I hope you enjoy the holiday season.
