Subject: Nuclear is a waste

If we dream of a safe world for our great-grandchildren, it makes sense to focus on technologies that utilize non-expendable resources, such as sun, tides, and wind. Uranium, like petroleum, is a limited resource. From extraction to waste disposal, the use of uranium is fraught with dangers. Chernobyl and Fukushima are warning enough. Let us stop creating nuclear waste, isolate and glassify all we can, and put it in monitored, retrievable storage in geologically stable granite caves.
