Re: Semi-Annual Report Uranerz Energy Corporation Nichols Ranch ISR Project SUA-1597

Dear Mr. McConnell,

This letter and attachment serves as the Semi-Annual Report for the Uranerz Energy Corporation Nichols Ranch ISR Project that is required by License Condition 11.1 (B) and (D) in SUA-1597. If you have any questions regarding the provided information, please contact me at 307-265-8900 or by email at [mthomas@uranerz.com](mailto:mthomas@uranerz.com).

Sincerely,

A handwritten signature in black ink, appearing to read "M. P. Thomas", written in a cursive style.

Michael P. Thomas  
Vice President Environmental, Safety, and Health  
Uranerz Energy Corporation

Attachment

cc: Ron Linton, NRC Project Manager

## **July 2011 – December 2011 Semi-Annual Report – Nichols Ranch ISR Project SUA-1597**

### **Introduction:**

The following Semi-Annual Report for SUA-1597 is being submitted to the Nuclear Regulatory Commission in accordance to SUA-1597 license condition 11.1 (B) and (D). The report summarizes the operational and environmental activities and monitoring for the Nichols Ranch and Hank Units from July 2011 through January 2011.

### **Activities to Date:**

Uranerz received its Wyoming Department of Environmental Quality – Land Quality Division Permit to Mine No. 778 on December 29, 2010. On July 19, 2011 Uranerz received Source Material License SUA-1597. With obtaining both the Permit to Mine No. 778 and SUA-1597, Uranerz began construction of the Nichols Ranch Unit CPP and Production Area #1 at the Nichols Ranch Unit on August 2, 2011. At the end of the reporting period, Uranerz was still working on constructing the CPP and associated facilities along with the installation of monitor ring, production zone, underlying, and overlying monitor wells for Production Area #1.

No activities have taken place at the Hank Unit during the reporting period.

### **Production Areas in Operation:**

During the reporting period there were no production areas in operation. Production Area #1 (PA#1) at the Nichols Ranch Unit is currently under construction with the installation of the monitor ring, production zone, underlying, and overlying wells. At the end of 2011, 71 wells have been drilled with 64 fully completed, 7 cased and cemented, and 50 wells mechanical integrity tested (MIT'd).

A hydrologic pump test was also conducted on the southern end of PA#1 in December 2011. A second pump test will be conducted on the northern end of PA#1 in 2012. When the pump tests are complete, all monitoring wells will then be sampled for baseline water quality parameters. The data and analysis from the pump test along with the baseline analytical water quality results will be submitted to the Nuclear Regulatory Commission (NRC) and the Wyoming Department of Environmental Quality – Land Quality Division (WDEQ-LQD) at a later date.

### **Production Areas in Restoration:**

No production areas are in restoration for the reporting period.

### **Excursion Well Status:**

No wells were on excursion status during the reporting process.

**Mechanical Integrity Testing:**

During the reporting period, 50 monitor wells had mechanical integrity tests (MIT) performed. All but five wells passed the MIT. Of the five wells that failed, two have been abandoned. MIT results are shown in Appendix A.

**Operational Monitoring:**

No operational monitoring was conducted during the reporting period.

**Effluent Monitoring:**

No effluent monitoring was conducted during the reporting period.

**Environmental Monitoring:**

Water levels for those wells that are located in or near the Nichols Ranch and Hank Units have been collected on a quarterly basis and submitted to the WDEQ-LQD in quarterly reports. The water levels are shown in Appendix B.

A meteorological station was installed during the reporting and is currently collecting data per license condition 12.7.

**Conclusion:**

Construction activities continued throughout the reporting period at the Nichols Ranch Unit. Progress was made in the erection of the Office, Maintenance, and Plant Buildings. PA#1 monitor well installation also progressed with all monitor ring wells and interior monitor wells drilled. One pump test was also conducted on the south end of PA#1. The information collected from the pump test will be incorporated into the Nichols Ranch Unit PA#1 Wellfield Package for future submittal to the NRC and WDEQ-LQD. Construction activities will continue to take place at the Nichols Ranch Unit in 2012. At this time, no activities have taken place at the Hank Unit.

All activities that have been conducted to date at the Nichols Ranch ISR Project are covered in the original surety estimate that was submitted when SUA-1597 was issued. No revisions are necessary at this time.
