Greg,

That definitely helps. Thanks!

Tina

Subject: FW: RESPONSE - SOARCA Brief Followup Question

Tina,

I hope this helps a little. The NRR procedure doesn't really get into specifics all that much, other than to tell you to consider uncertainty based on the guidance in NUREG-1855 and RG 1.174. If you're doing that (or have a good reason for doing something else), I think you've probably already addressed Mike's concern.

Greg

Subject: RESPONSE - SOARCA Brief Followup Question

I was referring to the risk informed decision-making steps that are captured in LIC-504 (attached). Although we are clearly not referring to an emergent issue with the development of the SOARCA, I was attempting to ensure that we were considering uncertainties in our estimates in a manner consistent with this NRR procedure. I think we are, but wanted to confirm.

Subject: QUERY - SOARCA Brief Followup Question

Mike,

T/11

During the SOARCA brief yesterday, you asked RES a question about NRR guidance/practices for using risk information. I got a call from the risk people in RES and they're requesting some clarification.

Can you give me a little more insight into your concern in that area? I know they've worked with NRR/DRA, but they want to make sure they have your question captured accurately so they fully address the issue.

Greg
