I live in Hendersonville, NC, but unable to attend Thursday's meeting. I would like to go on record as objecting to the proposed nuclear facility in Gaffney, SC. How many Chernobyls and Fukushimas do we need to make us fear such a facility so close to home? Even with an extremely limited danger of a similar catastrophe here, there is always the possibility of a terrorist attack and human error can and does happen all the time. Let's put our money and jobs into solar and wind energy which are both much more safe and environmental.
