EXECUTIVE SUMMARY

This Updated Final Safety Analysis Report (No. NUH-003, Revision 12, NRC Docket No. 72-1004) provides the generic safety analysis for the standardized NUHOMS^{®1} system for storage of light water reactor spent nuclear fuel assemblies. This system provides for the safe dry storage of spent fuel in a passive Independent Spent Fuel Storage Installation (ISFSI) which fully complies with the requirements of 10CFR72 and ANSI 57.9. The related NUHOMS[®]-24P Topical Report (No. NUH-002, Revision 1A, NRC Project No. M-49) was approved by the U.S. Nuclear Regulatory Commission on April 21, 1989. The original NUHOMS[®]-07P Topical Report (No. NUH-001, Revision 1A, NRC Project No. M-39) was approved by the U.S. Nuclear Regulatory Commission on March 28, 1986.

This Updated Final Safety Analysis Report (UFSAR) formed the basis for generic NRC certification of the standardized NUHOMS[®] system and will be used by 10CFR50/10CFR72 general license holders in accordance with 10CFR72 Subparts K and L. It is also suitable for reference in 10CFR72 site specific license applications. In January 1995, the USNRC issued a generic Certificate of Compliance to VECTRA for the standardized NUHOMS[®] canister/module horizontal cask storage system. The Nuclear Regulatory Commission staff does not intend to repeat the review in order to authorize the use of a standardized NUHOMS[®] ISFSI by a general license holder.

The principal features of the standardized NUHOMS[®] system which differ from the previously approved NUHOMS[®]-24P system are:

1. A free-standing prefabricated horizontal storage module founded on an ISFSI basemat which is not important to safety.
2. A standardized dry shielded canister for on-site dry storage and eventual off-site shipment of spent PWR or BWR fuel assemblies.
3. Removal of site specific dependencies to allow direct implementation by 10CFR72 general license holders.
4. Design qualification for five-year cooled PWR and BWR spent fuel.

¹ NUHOMS[®] is a registered trademark of Transnuclear, Inc.

The NUHOMS[®] system provides long-term interim storage for spent fuel assemblies which have been out of the reactor for a sufficient period of time and which comply with the criteria set forth in this UFSAR. The fuel assemblies are confined in a helium atmosphere by a canister containment pressure vessel. The canister is protected and shielded by a massive reinforced concrete module. Decay heat is removed from the canister and the concrete module by a passive natural draft convection ventilation system.

The canisterized spent fuel assemblies are transferred from the plant's spent fuel pool to the concrete storage modules located at the ISFSI in a transfer cask. The cask is aligned with the storage module and the canister is inserted into the module by means of a hydraulic ram. The NUHOMS[®] system is a totally passive installation that is designed to provide shielding and safe confinement of spent fuel for a range of postulated accident conditions and natural phenomena. As a condition of the USNRC Certificate of Compliance, temperature monitoring of the concrete module is required.

Revision 4A of this UFSAR consists of a revision to the previously submitted report and incorporates the conditions of use specified by the Certificate and US NRC's Safety Evaluation Report that were not included in earlier revisions, along with revisions to reflect design modifications and utility comments.

Revision 5 of this UFSAR incorporates all design modifications and supporting analysis implemented per Condition 9 of USNRC Certificate of Compliance (CoC) since issuance of Revision 4A. It also incorporates changes due to approval of Amendments 1 and 2 to the CoC.

Revision 6 of this UFSAR incorporates all design modifications implemented per Condition 9 of CoC 1004 since issuance of UFSAR Revision 5. It also incorporates changes implemented under CoC Amendment No. 3.

Revision 7 of this UFSAR incorporates all design modifications implemented per 72.48 since the issuance of UFSAR Revision 6. It also incorporates changes implemented due to approval of Amendment No. 4 to CoC 1004.

Revision 8 of this UFSAR incorporates design modifications implemented per 72.48 since the issuance of UFSAR Revision 7. It also incorporates changes implemented due to approval of Amendments 5, 6 and 7 to CoC 1004.

Revision 9 of this UFSAR incorporates design modifications implemented per 72.48 since the issuance of UFSAR Revision 8. It also incorporates changes implemented due to approval of Amendment 8 CoC 1004.

Revision 10 of this UFSAR incorporates design modifications implemented per 72.48 since the issuance of UFSAR Revision 9. It also incorporates changes implemented due to approval of Amendment 9 CoC 1004.

Revision 11 of this UFSAR incorporates design modifications implemented per 72.48 since the issuance of UFSAR Revision 10. It also incorporates changes implemented due to approval of Amendment 10 to CoC 1004.

Revision 12 of this UFSAR incorporates design modifications implemented per 10 CFR 72.48 since the issuance of UFSAR Revision 11.
