**Cc:** McGinty, Tim; Pruett, Troy; Andersen, James; HOO Hoc  
**Subject:** ERF for INES Level 0 Rating of North Anna Alert Declaration due to Earthquake - SUBMITTED  
**Attachments:** 307e6688-a9b8-4a03-b4f3-4bc500e6c150[1].pdf

Attached please find a pdf version of what will be sent out on IAEA's NEWS. The HOOs will route this within NRC as per their routine procedures.

Great job everyone!

Cyndi

Cyndi,

I talked to John, we're fine with the summary paragraph.

**Importance:** High

David & John-

One of the features of the new USIE website cautions that only the first 300 characters are shown on the public page, so I would propose that the summary start with the following paragraph which is 321 characters to allow for an intro and end note that the NPP is in cold shutdown and that power has been restored (then the rest of the summary and justification as o have written would be found when the user clicks on the event):

On 23 August 23 2011, Units 1 and 2 of the North Anna Power Station declared an Alert, Emergency Action Level due to a loss of offsite power following a 5.8 seismic event on the Richter Scale. As of August 24, 2011, Unit 1 and Unit 2 are proceeding to cold shutdown conditions to allow for inspections inside containment. Normal offsite power has been restored to the North Anna Power Station.

Do you concur with the above short summary to precede the full description?

Dr. Jones,

Please find the attached ERF that has been cleared for release to the INES by NRR.

The following three documents should be linked with the posting:

8/23/2011	<a href="#">11-153</a>	NRC Monitoring Alert at North Anna Following Virginia Earthquake
8/24/2011	<a href="#">11-157</a>	NRC Continues to Assess North Anna Nuclear Power Plant Following Virginia Earthquake
<a href="#">08/25/2011</a>		NRC Clarifies Earthquake Measurements and Design Criteria

Regards,  
David Garmon
