Lisle, IL 60532-4352

Subject: GEH Morris facility
License No. SNM-2500

This letter is to document a change in the systems being utilized at the GE-Hitachi Morris facility. As we discussed on February 1, 2012, the Grundy County Sheriff is making changes to their system that will require the Morris facility to revise the current procedure.

The revisions at both facilities will result in an improved system. Testing will be performed before the switch to assure no gaps in service and there will be no decrease in effectiveness due to the changes. The changes will be documented in an appendix to the *Physical Security Plan for Morris Operation*, NEDS-14507-D5, and forwarded to the NRC Douglas L. Garner, Nuclear Security and Incident Response, Washington, D.C. for information. The changes will be incorporated in the next revision to the plan.

We anticipate having the plan modifications completed and submitted to the NRC by March 16, 2012. If you have any questions, please contact me at your convenience.

Sincerely,

Joseph Tenorio
Morris Plant Manager
