IOEB Clearinghouse Screening Summary for Wednesday, June 24, 2009

*****NOTE: THIS SUMMARY IS OFFICIAL USE ONLY -- SENSITIVE INTERNAL INFORMATION. DO NOT FORWARD OUTSIDE OF NRC*****

Issues For Resolution (IFR): One

1. Emergency Diesel Generator Instrumentation & Control Issues 2003-2009 -- The subject of a recent OpE COMM entitled "EDG Failed To Start During a Slow Start Sequence for Monthly Surveillance" is screened in as an Issue for Resolution (IFR). At least six sites have experienced issues during this time frame with alarming and tripping of diesel generators from engine speed circuits. Diesel generator annunciator systems have also contributed to this issue with degraded annunciator power supplies and/or degraded annunciator circuit cards. Licensees have added circuit filters in various locations from sensors to power supplies to reduce the "noise" on speed circuitry. Industry has reported operating experience on this issue but the most recent **White** finding at Duane Arnold highlights the need for opening an operating experience IFR to evaluate this issue by NRC staff.
