CHAPTER 17

QUALITY ASSURANCE

17.1 QUALITY ASSURANCE DURING THE DESIGN AND CONSTRUCTION PHASES

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

Replace the information in DCD **Section 17.1** with the following information.

HAR COL 17.5-1

Progress Energy, Inc (Progress Energy). is responsible for the establishment and execution of quality assurance program requirements during the design, construction and operations phases of the Shearon Harris Nuclear Power Plant Units 2 and 3 (HAR). Progress Energy may and has delegated to others as described below the work of establishing and executing the quality assurance program, or any parts thereof, but retains responsibility for the quality assurance program.

During the COL application phase, the Quality Assurance Program Description defined in the Shearon Harris Nuclear Power Plant Unit 1 FSAR (current revision)(**Reference 201**) identifies the quality assurance requirements that will be in effect until the Quality Assurance Program Description (QAPD) discussed in **Section 17.5** becomes effective. Progress Energy will implement these quality assurance requirements through NGGM-PM-0030, Quality Assurance Plan for New Nuclear Plant Development and Construction Activities (**Reference 202**). This plan defines the interface between the Nuclear Plant Development organization and the existing quality assurance program implementing processes and procedures.

The Quality Assurance Program Description (QAPD) discussed in **Section 17.5** is NGGM-PM-0033, Progress Energy New Nuclear Plant Development Quality Assurance Program Description Topical Report. This is the same document submitted for all Progress Energy COL applications and is intended to be applied to all docket numbers identified in the document. This QAPD will become effective following approval of a Progress Energy COL application. With respect to the approved COL, the QAPD will be implemented within 30 days following issuance, or prior to the initiation of quality related activities following COL issuance, whichever is later. With respect to the remaining COLA, the QAPD may be implemented for COLA development and approval activities as early as QAPD approval. However, the QAPD will be implemented no later than 30 days following issuance of the applicable COL, or prior to the initiation of quality related activities following COL issuance, whichever is later.

Progress Energy procured the COL application development and site characterization services in accordance with the quality assurance requirements identified in the Shearon Harris Nuclear Power Plant Unit 1 FSAR (current

**Shearon Harris Nuclear Power Plant Units 2 and 3
COL Application
Part 2, Final Safety Analysis Report**

revision)(Reference 201), as implemented through NGGM-PM-0030 (Reference 202) and existing procedures from three companies that formed the Joint Venture Team; Sargent & Lundy LLC; WorleyParsons Group, Inc.; and CH2M HILL Inc. Each company was contracted to perform their assigned tasks in accordance with the requirements of their own Quality Assurance Program (References 203, 204, and 205) that had been reviewed and approved by Progress Energy for the conduct of safety-related work. The process of collection, review, and analysis of specific data for site characterization was performed under the CH2M HILL Quality Assurance Program as described in the Nuclear Business Group Quality Manual, NBG-QA-02-00 (Reference 205).

Progress Energy maintains oversight of the Joint Venture Team activities performed in support of the COL application development contract in accordance with the quality assurance program requirements that satisfy 10 CFR 50 Appendix B defined in the Shearon Harris Nuclear Power Plant Unit 1 FSAR(current revision)(Reference 201) and implemented through NGGM-PM-0030, Quality Assurance Plan for New Nuclear Plant Development and Construction Activities (Reference 202) or the QAPD described in Section 17.5, depending on when these activities are performed. Progress Energy oversight of the COL development activities is provided through conducting Quality Assurance audits and surveillances of the Joint Venture Team activities and processes, and by direct participation in COL development activities, including providing site-specific applicant input and review of COL application content, signing the COL application as the applicant at submittal, and working directly with the Joint Venture Team to respond to NRC requests for additional information.

The quality assurance program applied to the development of the AP1000 design is described in Section 17.3 of the DCD which is incorporated by reference.

The design and construction of the proposed AP1000 units would be a service procured by Progress Energy. The service would be performed in accordance with the suppliers quality assurance program that was evaluated and accepted by Progress Energy. Progress Energy would maintain oversight of these design and construction activities in accordance with the quality assurance program requirements of the Shearon Harris Nuclear Power Plant Unit 1 FSAR(current revision)(Reference 201) or the QAPD described in Section 17.5, depending on when these activities were performed.

The Progress Energy Quality Assurance Program Description Topical Report (NGGM-PM-0033) discussed in Section 17.5 and provided in Part 11 of the COLA will be implemented for HAR 2 and 3 no later than thirty days following the issuance of the HAR 2 and 3 COL, or prior to the initiation of quality related activities following COL issuance, whichever is later. The applicable portions of the QAPD will be utilized for activities related to the design, construction and operational phases for the new nuclear units. As stated in FSAR Table 13.4-201, full implementation of the operations phase requirements will begin no later than 30 days prior to fuel load.

17.4 DESIGN RELIABILITY ASSURANCE PROGRAM

This **section** of the referenced DCD is incorporated by reference with the following departures and/or supplements.

STD SUP 17.4-1

The quality assurance requirements for non-safety related SSCs within the scope of D-RAP is in accordance with the Quality Assurance Program Description (QAPD), Part III.

**Shearon Harris Nuclear Power Plant Units 2 and 3
COL Application
Part 2, Final Safety Analysis Report**

STD DEP 1.1-1 17.5 QUALITY ASSURANCE PROGRAM DESCRIPTION – NEW LICENSE APPLICANTS

HAR COL 17.5-1 The Quality Assurance Program in place during the design, construction, and operations phases is described in the QAPD, which is maintained as a separate document. This QAPD is incorporated by reference (see [Table 1.6-201](#)). This QAPD is based on NEI 06-14A, “Quality Assurance Program Description” ([Reference 206](#)).

Conformance statements for QA-related Regulatory Guides (including Regulatory Guides 1.28, 1.30, 1.33, 1.38, 1.39, 1.94, and 1.116) are provided in [Appendix 1AA](#). While many Regulatory Guide positions can be identified as applicable to the scope of work identified and addressed by the DCD and others can be identified as applicable to the scope of work identified and addressed by the COLA, some QA guidance related positions could be accomplished by either scope of work and thus be addressed in either the DCD or the COLA. These positions are primarily dependent on who performs the work. The DCD conformance statement indicates an exception to apply NQA-1. The COLA identifies an exception to apply NQA-1. Per DCD [Section 17.3](#), WEC work performed up to March 15, 2007 applied a 1991 version of the standard. A 1994 version of the standard is applied for work performed after that date by WEC. If the work is performed under the applicant’s COL program, the 1994 version of NQA-1 identified in the COLA QAPD is applied. Thus, DCD scope (identified in DCD Appendix 1A) and “remaining scope” differentiate the application of the guidance identified in these Regulatory Guides.

HAR COL 17.5-1 The QAPD is the Progress Energy New Nuclear Plant Development Quality Assurance Program Description Topical Report.

HAR COL 17.5-1 [Table 13.4-201](#) provides milestones for operational quality assurance program implementation.

HAR COL 17.5-1 The Quality Assurance Program in place prior to implementation of the QAPD is described in [Section 17.1](#).

STD DEP 1.1-1 17.6 MAINTENANCE RULE PROGRAM

STD SUP 17.6-1
STD COL 3.8-5 This section incorporates by reference NEI 07-02A, "Generic FSAR Template Guidance for Maintenance Rule Program Description for Plants Licensed Under 10 CFR Part 52" ([Reference 207](#)), with the following supplemental information. See [Table 1.6-201](#).

[Table 13.4-201](#) provides milestones for maintenance rule program implementation.

The text of the template provided in NEI 07-02A is generically numbered as "17.X." When the template is incorporated by reference into this FSAR, section numbering is changed from "17.X" to "17.6."

STD SUP 17.6-1 Descriptions of the programs listed in Subsection 17.6.3 of NEI 07-02A are provided in the following FSAR chapters/sections:

The maintenance rule program ([Section 17.6](#))

The quality assurance program ([Section 17.5](#))

Inservice inspection program ([Sections 5.2](#) and [6.6](#))

Inservice testing program ([Section 3.9](#))

The technical specifications surveillance test program ([Chapter 16](#))

STD SUP 17.6-2 Condition monitoring of underground or inaccessible cables is incorporated into the maintenance rule program. The cable condition monitoring program incorporates lessons learned from industry operating experience, addresses regulatory guidance, and utilizes information from detailed design and procurement documents to determine the appropriate inspections, tests and monitoring criteria for underground and inaccessible cables within the scope of the maintenance rule (i.e., 10 CFR 50.65). The program takes into consideration Generic Letter 2007-01.
