Subject: NORTH ANNORTH ANNA POWER STATION, UNITS 1 AND 2-ACCEPTANCE REVIEW, Proposed Elimination of the SG Water level Low Coincident with Steam Flow/Feedwater Flow Mismatch Reactor Trip (TAC NOS. ME8566, ME8567)-ML12094A307

By letter dated April 2, 2012, Virginia Electric and Power Company submitted a license amendment request for Elimination of the SG Water level Low Coincident with Steam Flow/Feedwater Flow Mismatch Reactor Trip for North Anna Power Station, Units 1 and 2. The purpose of this email is to provide the results of the U.S. Nuclear Regulatory Commission (NRC) staff's acceptance review of this amendment request. The acceptance review was performed to determine if there is sufficient technical information in scope and depth to allow the NRC staff to complete its detailed technical review. The acceptance review is also intended to identify whether the application has any readily apparent information insufficiencies in its characterization of the regulatory requirements or the licensing basis of the plant.

The NRC staff has reviewed your application and concluded that it does provide technical information in sufficient detail to enable the NRC staff to complete its detailed technical review and make an independent assessment regarding the acceptability of the proposed request in terms of regulatory requirements and the protection of public health and safety and the environment. Given the lesser scope and depth of the acceptance review as compared to the detailed technical review, there may be instances in which issues that impact the NRC staff's ability to complete the detailed technical review are identified despite completion of an adequate acceptance review. If additional information is needed, you will be advised by separate correspondence.

If you have any questions, please contact me at 301-415-2597.

V. Sreenivas, PH.D., C.P.M.,
