Your Action Content

As a Downwinder who was poisoned with radioactive fallout from 30 atom bomb tests in the early 1950s, I am very concerned about the safety of citizens in regard to nuclear matters. No one was concerned about my family & community (we were called a "low use segment of the population" by President Eisenhower) but I am concerned for the welfare of all. The disaster at Fukishima in Japan should be on everyone's mind. How would they evacuate Tokyo if need be? Future planning is essential. Let's do the right thing and be on the right side of history in this regard. This should be of concern to all citizens, as the matter affects everyone, some way, some how. Thank you for your time.
