Subject: Shut down nuclear plants

May 23, 2012 (11:45 am)

OFFICE OF SECRETARY
RULEMAKINGS AND
ADJUDICATIONS STAFF

The only reason there wasn't more of a melt down at Fukushima is because one of the workers disobeyed orders and allowed sea water into the plant. If he hadn't the disaster would have been worse. ;What does that tell you about those in charge?

Japan is crisscrossed by faults as is California and a major earthquake is predicted in about 4 years which would destroy Japan

General Electric is the maker of this plant and of U.S. plants. No nuclear plant is safe. Nuclear waste hangs around for millions of years.

After Fukushima there were more deaths throughout the United States. This study was stopped after about 3 months.

We can't afford to have nuclear plants operating. A disaster is just waiting to happen.
