**Subject:** Expand emergency evacuation zones

May 23, 2012 (11:45 am)

OFFICE OF SECRETARY  
RULEMAKINGS AND  
ADJUDICATIONS STAFF

Since we have over 100 operating nuclear plants, many of them aging and potential disasters waiting to happen, the least that must be done is to expand the evacuation zones to at least double of what the current standards are!

No level of nuclear radiation has been proven safe!

The nuclear industry cares nothing about anything but their profits and that has always been obvious! Since you work for us, the American people, and you and your families live here, wouldn't it be wiser on your part, to improve our emergency evacuation zones by expanding them, so that, just maybe, you and your families and the rest of us, could have a better chance of less exposure to radiation when an accident, or natural disaster-related accident occurs in the USA?

Because it is only a matter of time, before we suffer the same fate as Japan, if we survive Fukushima's reactor 4 not being damaged further and killing us all, that is!

Money and power cannot save, even you, if you don't do more to protect all of us!

I trust that you have at least enough humanity in your being to do the right thing!
