Bill:
NRC proposes the following amendment to SUA-1341, License Condition 10.5:

- 10.5 The licensee is authorized to conduct operations at an annual throughput at Christensen Ranch that does not exceed an average ~~maximum~~ flow rate of 4000 gallons per minute, exclusive of restoration flow. Annual dried yellowcake production shall not exceed 2.5 million pounds.

[Applicable Amendments: 5, 13, 22]

Clean version in the license would read:

- 10.5 The licensee is authorized to conduct operations at an annual throughput at Christensen Ranch that does not exceed an average flow rate of 4,000 gallons per minute, exclusive of restoration flow. Annual dried yellowcake production shall not exceed 2.5 million pounds.

[Applicable Amendments: 5, 13, 22]

This language is nearly identical to the language in the 1998 NRC SER Section 1.1, Description of Proposed Action. I need to know if this new 10.5 language is acceptable to Uranium One.. At this point, no decisions have been made and the language may be modified upon further review.
