Application for Renewal of Material License

Item 5

1.
 - a. Cesium 137 (Cs-137)
 - b. Sealed Sources (CPN International Model CPN-131)
 - c. 50 millicuries total and no single source to exceed the maximum activity specified in the certificate of registration issued by the U.S. Nuclear Regulatory Commission or an Agreement State

2.
 - a. Americium 241 (Am-241)
 - b. Sealed Sources (CPN International Model CPN-131)
 - c. 250 millicuries total and no single source to exceed the maximum activity specified in the certificate of registration issued by the U.S. Nuclear Regulatory Commission or an Agreement State.

Item 6

Authorized user for measuring physical properties of materials, in portable gauging devices that have been registered either with U.S. Nuclear Regulatory Commission under 10 CFR 32.210 or with and Agreement State and have been distributed in accordance with a Commissioned of Agreement State specific license authorizing distribution to persons specifically authorized by Commission of Agreement State license to receive, posses and use the devices.

Item 7

*Currently reads:

*Matthew J. LaChance will be the Radiation Safety Officer for this license and has completed the Troxler and the CPN gauge user's safety course as well as the Troxler 8-hour Radiation Safety Office course, and a 40-hour Radiation Safety Officer training course (see attached)

***Please update current RSO and item 7 to read:

***Jose R Otero Jr. will be the Radiation Safety Officer for this license and has completed the Troxler user's safety course as well as the Troxler 8-hour Radiation Safety Office course, and a 40-hour Radiation Safety Officer training course (see attached)

Item 8

As a minimum requirement, each authorized user will successfully complete the portable gauge manufacturer's course for users as stated in NUREG-1556, Vol. 1, Rev. 1, Section 8, Item 8, or an equivalent course that meets NUREG-1556, Vol. 1, Rev. 1, Appendix D criteria.

Item 9

The gauges will be stored in their transport cases in a locked enclosure located in an unoccupied storeroom that is located at least 15 feet from the workstation nearest the non-monitored individual. Only authorized users will have access to the keys to the enclosure.

Item 10

See attached "Radiation Safety Program"

Item 11

Vanasse Hangen Brustlin, Inc., will dispose of gauges in accordance with NRC requirements by transfer to an authorized recipient such as the gauge's manufacturer or other licensed facility.

RADIATION SAFETY PROGRAM

1. RADIATION SAFETY OFFICER

A. Jose R. Otero, Jr. has been designated as the company radiation safety officer and will assume the duties and responsibilities that include the following:

1. To ensure that all terms and conditions of the license are being met and that the information contained in the license is up-to-date.
2. To ensure that the equipment has been leak tested in the required timely manner and that the leak test is performed in the manner prescribed by the equipment manufacturer.
3. To ensure that the use of the equipment is only by individuals that have been authorized by the Radiation Safety Officer and that all users wear personal monitoring equipment when utilizing the equipment.
4. To maintain the records as required by the license and the regulations. These records shall include personnel exposure records, leak test records and training certificates for all users.
5. To ensure that the equipment is properly secured against unauthorized removal at all times when it is not in use.
6. To serve as a point of contact and give assistance in case of emergency such as equipment damaged in the field or theft and to notify the proper authorities in case of emergency.
7. To ensure that all users have read and understand the radiation safety operating and emergency procedures.
8. To post "CAUTION - RADIOACTIVE MATERIAL" on the storage location, along with NRS4C Form 3 "Notice To Employees" in a nearby visible area.

2. OPERATING PROCEDURES

A. Transportation of Equipment

1. All possible means shall be provided to ensure that the equipment is fully secured in the transportation vehicle and the equipment is away from the passenger compartment. When transporting in an enclosed vehicle (car or van), the vehicle will be locked. When transporting in an open bed vehicle, the gauge should be securely fastened and locked in the truck bed.
2. The gauge will be transported in the transportation case. The U.S. Department of Transportation required that the gauge be transported in a properly labeled carrying case.
3. At all times during transport, the operator will have a properly completed Bill of Lading for each gauge along with the source certificate, copy of the current license, and personal ID.

B. Utilization Procedures

1. When the gauge is in the field, we as the authorized user will maintain control over the gauge at all times. The gauge will never be left unattended.
2. When not making measurements, the gauge will be placed in the transportation case and returned to its permanent storage area as soon as possible. The gauge is to be used for its intended purpose only. By doing so, we will maintain any radiation exposure to as low as reasonably attainable.
3. When using the equipment, we will wear the personal monitoring device that has been assigned to us. When we are not using the equipment, our monitoring device is to be stored in a radiation free area that has been designated in the office. Film badges will be type B1 (from RS Landaver and Co. 3127557000) which will monitor both gamma and neutron radiation.
4. A utilization log book will be used to control the gauges whereabouts at all times.

C. Maintenance and Leak Test Procedures

1. Periodic maintenance will include cleaning the gauge. During any maintenance, we will wear our personal monitoring device.
2. No maintenance will be performed in which the radioactive source is removed from the gauge. For this type of maintenance, the gauge will be returned to the manufacturer.
3. The leak test will be performed using the TROXLER Model 3880 Leak Test Kit. The leak test will be performed using the manufacturer's instructions. Again, the personal monitoring device will be employed. Gauges will be leak tested at intervals not to exceed six (6) months.

D. Emergency Procedures

1. In the event of physical damage to a gauge, the following will be performed:
 - i) Immediately cordon off the area around the gauge. An area radius of 15 feet will be sufficient.
 - ii) If a vehicle is involved, it must be stopped until the extent of the contamination can be determined.
 - iii) A visual inspection of the gauge is to be made to determine if the source housing and/or shielding has been damaged.
 - iv) At the earliest possible time, when the situation is under control, you must contact Jose R. Otero, Jr. (860) 324-2690 (cell) or (860) 632-1500 (office). Describe the present conditions and follow the instructions of the Radiation Safety Officer.
2. In the event the gauge is lost or stolen, immediately notify the Radiation Safety Officer as listed above in item 2.D.1.iv.
3. A copy of these procedures must be kept with the gauge for reference.
