

WORKSHOP #4, Issue Compilation

Davis-Besse Loss of Feedwater Event

You have been provided with a description of a loss of feedwater event that occurred at the Davis-Besse plant in 1985. This material was extracted in its entirety from NUREG-1154 (Loss of Main and Auxiliary Feedwater at the Davis-Besse Plant on June 9, 1985).

Your TEAM assignment

- After considering the event, compile a list of issues that, in your judgment, warrant further evaluation (i.e., what piqued your regulatory interest).
- Prepare a presentation of your results and be ready to discuss the technical logic of your selections as directed by the instructor.
