data

The Sea Turtle Stranding and Salvage Network (STSSN) was formally established in 1980 to collect information on and document strandings of marine turtles along the U.S. Gulf of Mexico and Atlantic coasts. The network encompasses the coastal areas of the eighteen state region from Maine through Texas, and includes portions of the U.S. Caribbean. Data are compiled through the efforts of network participants who document marine turtle strandings in their respective areas and contribute those data to the centralized STSSN data base.

These reports summarize marine turtle strandings documented through the efforts of the Sea Turtle Stranding and Salvage Network (STSSN). These numbers are considered minimum stranding figures, as they are reported strandings only, not all stranding events. Effort expended in the collection of stranding data varied both geographically and temporally. Coverage ranges from systematic weekly (or more frequent) sampling to no sampling at all in some areas. All six species known to inhabit the waters of the Gulf of Mexico and U.S. Atlantic are included, these include: loggerheads (*Caretta caretta*), greens (*Chelonia mydas*), Kemp's ridleys (*Lepidochelys kempii*), hawksbills (*Eretmochelys imbricata*), leatherbacks (*Dermochelys coriacea*) and olive ridley (*Lepidochelys olivacea*).

True strandings are defined as turtles which wash ashore dead or alive, or are found floating dead or alive (generally in a weakened condition). Other reports received are not included in these reports. Headstarted turtles are hatched and raised in captivity for approximately one year before being tagged and released. Strandings of headstarted turtles are excluded because they may represent a bias if their stranding was an artifact of captive rearing and release. Reports of incidentally captured turtles, posthatchlings and live sighting reports received through the network were archived, but are not included in this report as these records are not considered to be true strandings.

Using the Online Reports, one can obtain basic stranding information. Queries can include Region, Zone, State, County, Species, Year and Month.

Please review the [Data Access Policy](#) prior to use. Any additional information needs to be requested from the STSSN National Coordinator. Requests should be very specific.

**In order to run an online report, you must check the box to accept the Data Access Policy:**  OR [Return to Previous Menu](#)

<p><b>Public Data Access and Release Policy</b></p> <p>Any publication or use of these data must credit the Sea Turtle Stranding and Salvage Network (STSSN).</p> <p>Users with the intent to publicly present or publish these data are strongly encouraged to consult and/or collaborate with contributing network coordinators.</p> <p>Preliminary data posted on this site are subject to change, and are not recommended for use in publications/analyses.</p>	<p><b>Zone Maps</b></p> <p>To see the report window and a map at the same time, set the report window size smaller than full screen.</p> <p><a href="#">Map of Gulf of Mexico Zones</a>  <a href="#">Map of Southern Atlantic zones</a>  <a href="#">Map of Northern Atlantic zones</a></p>
