

## **CORRECTIONS NEEDED IN THE “Information Sheet on the Enrico Fermi Unit 3 Combined Operating Licenses Environmental Review”**

At the bottom of page 4 of this Information Sheet, the corrections indicated below are needed because the combined license application for the proposed Fermi Unit 3 is for one new unit (vs. two units). Similarly, all instances of “licenses~~s~~” and “units~~s~~” throughout this document should be changed to the singular version of these words (i.e., “license” and “unit”).

### **Chapter 10 - Conclusions and Recommendations**

*The final chapter of the EIS provides the staffs preliminary recommendation whether the combined licenses should be issued to Detroit Edison. The chapter summarizes the impacts of constructing and operating ~~two~~the new reactors~~s~~. It also weighs the costs (e.g., habitat loss, traffic noise) versus the benefits (e.g., more jobs, electricity generation) of the ~~two~~ new units.*

*The NRC staff's preliminary recommendation to the Commission - related to the environmental aspects of the proposed action - is that the combined licenses~~s~~ for Fermi Unit 3 be issued. This recommendation will be part of the input the Commission uses to determine whether or not to issue the combined licenses~~s~~ to Detroit Edison.*
