Chairman Gregory B. Jaczko
U.S. Nuclear Regulatory Commission
One White Flint North
11555 Rockville Pike
Rockville, MD 20852

Dear Chairman Jaczko:

We write to you again to express our concerns over the relicensing of the Pilgrim Nuclear Power Station.

The report of the "Near-Term Task Force," commissioned by the NRC after the catastrophe at the Fukushima Dai-Ichi nuclear power plant in Japan, called attention to several key findings and recommendations needed to ensure the full operability and safety of Pilgrim.

Among these recommendations, the Task Force discussed various issues which we believe should be addressed prior to the relicensing of Pilgrim. Those recommendations include increasing the "minimum coping time" to eight hours at each unit. In other words, the systems that would take over would have to be able to sustain their operations for at least eight hours, in a manner that requires minimal operator action. The Task Force also recommended an "extended coping capability" of 72 hours, during which time operators could either restore power or deploy portable equipment that could sustainably cool the nuclear core, and the spent fuel pools. The Task Force additionally recommended requiring the "coping systems and equipment" to be stored fifteen to twenty feet above the flooding level of the plant.

With regard to spent fuel pools, as the promise of a nuclear waste depository may never be fulfilled, we not only support, but also expect the transfer of the spent fuel rods currently sitting at Pilgrim into dry cask storage. For several years now we have asked for this important public safety initiative to be done and for equally as many years, our pleas have fallen on deaf ears. This is a primary concern of several elected officials in the Commonwealth, including the Governor and the Attorney General.

WWW.MASENATE.GOV

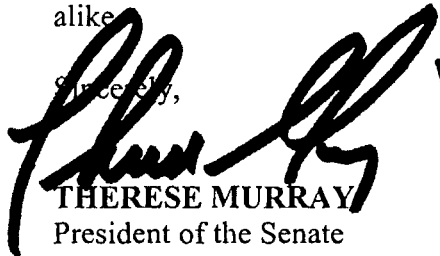

However, until those spent fuel rods can be safely transferred to dry cask storage, the Task Force recommended requiring improved instrumentation that would allow operators to monitor the condition of the spent fuel pools from the control room. They also recommended requiring seismically-triggered sprinkler systems, supplied by independent pumping capabilities.

Finally, the Task Force considered, and offered recommendations for improvements of, the use of reliable hardened vents that could be used to relieve built-up air pressure.

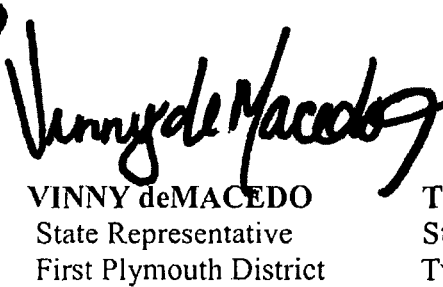

With these recommendations in mind, we respectfully request that the NRC require, as a condition of relicensing, the completion of these Task Force recommendations by the owners of the Pilgrim plant to ensure a safer community for all residents of and visitors to the Plymouth area and the Commonwealth of Massachusetts.

We also hope that, should the NRC move forward with the relicensing, that serious consideration be given to shortening the period of the license down from the current 20 years. With increased inspections, the NRC will ensure the continued integrity of the existing infrastructure while alleviating the concerns of residents and elected officials alike.

Sincerely,

THERESE MURRAY
President of the Senate
