**Subject:** Fukushima-related Comments for 7-23-2012

Good morning,

Acknowledging that there is presently a VERY effective Fukushima Daiichi news blackout, never-the-less, here are some topics I would like to see covered.

1. A comparison of the no-earthquake-damage-reported event today at Exelon/Oyster Creek, (Event Number 48125), where, apparently, emergency condensers were in service to remove decay heat with TEPCO/Fukushima Daiichi Unit 1 where no earthquake damage was reported and emergency condensers did not remove decay heat.
2. Water inventory progress. Has the contaminated water in building basements seeped through foundation (earthquake-caused) cracks and been pumped away by the newly installed site deep well pumps?
3. Any plans to flood up Unit 1 or Unit 2 or Unit 3 to reduce radiation dose.
4. Any reason to consider the Unit 1 and Unit 2 and Unit 3 spent fuel pools and their supporting structure(s) as not damaged.
5. Any progress in finding where nuclear fuel is now in Unit 1 and Unit 2 and Unit 3.
6. Any risk-based decision to off-load nuclear fuel from Unit 5 or Unit 6.
7. Any reduction in staff assigned to units that are no longer licensed.
8. Any risk-informed decisions on removing the nuclear fuel in reactors 1 to 4 at Fukushima Daini.
9. Any credible reason why unloading the shored up Fukushima Daiichi Unit 4 elevated spent fuel pool has to wait until the end of next year to begin in earnest.

Thank you,

Tom Gurdziel
