State Occupational Injuries, Illnesses, and Fatalities

Overview of State data available

State data presenting the number and frequency of work-related injuries, illnesses, and fatal injuries are available from two BLS programs: nonfatal cases of work-related injuries and illnesses that are recorded by employers under the Occupational Safety and Health Administration's (OSHA's) recordkeeping guidelines are available for 46 States and Territories from the BLS Survey of Occupational Injuries and Illnesses (SOII); fatal cases of work-related injuries are available for all States, Territories, and New York City under a separate program, the BLS Census of Fatal Occupational Injuries (CFOI).

Note: The number of States for which SOII data are available varies from year to year because not all States have survey sample sizes sufficient to generate State specific estimates of workplace injuries and illnesses. Among those States that do generate State estimates, the sample sizes often are not sufficient to generate estimates at the same level of detail as are available from the national estimates. The industries for which data are available also vary among States, primarily due to the differences in industry concentration and sample size from one State to the next. An asterisk (*) indicates that State estimates are available for both public and private industry.

Many of these tables are available as **PDF files only**. Please see information regarding [how to read a PDF file](#).
