SUBJECT:

R.E. Ginna Nuclear Power Plant

Docket No. 50-244

LER 2012-001, Automatic Start of "B" Emergency Diesel Generator

Caused by Loss of Offsite Circuit 767 Due to Wildlife

The attached Licensee Event Report (LER) 2012-001 is submitted under the provisions of NUREG-1022, Event Reporting Guidelines. There are no new commitments contained in this submittal. Should you have any questions regarding the information in this letter, please contact Mr. Thomas Harding at (585) 771-5219.

Very truly yours,

Edwin D. Dean III

LICENSEE EVENT REPORT (LER) U.S. NUCLEAR REGULATORY COMMISSION NRC FORM 366A 10-2010) CONTINUATION SHEET 2. DOCKET 6. LER NUMBER 3. PAGE 1. FACILITY NAME SEQUENTIAL REV YEAR NUMBER NO. OF 3 2 R.E. Ginna Nuclear Power Plant 05000244 2012 001 *:* 0

NARRATIVE

DESCRIPTION OF EVENT

A. PRE-EVENT PLANT CONDITIONS:

- On June 03, 2012 the plant was in Mode 1 at approximately 100% reactor power. Reactor Coolant System (RCS) pressure was 2235 psig and RCS temperature was 574F. The offsite electrical system was in the 50%/50% lineup, meaning that each offsite circuit was providing power to two (2) of the four (4) 480 Volt Safeguards Busses.

B. EVENT:

- On June 03, 2012 at approximately 0239, offsite power circuit 767 was lost due to a fault caused by a raccoon. This resulted in a momentary loss of safeguards busses 16 and 17. The B emergency diesel generator automatically started and supplied power to busses 16 and 17 as designed.
- Off site power circuit 7T remained operable during this event. The offsite power configuration
 was later changed to a 100%/0% lineup, with circuit 7T supplying offsite power
 requirements.
- The plant remained at approximately 100% power throughout the event.
- C. INOPERABLE STRUCTURES, COMPONENTS OR SYSTEMS THAT CONTRIBUTED TO THE EVENT:
 - None.
- D. DATES AND APPROXIMATE TIMES OF MAJOR OCCURRENCES:

06/03/2012, 0239 EST Event Date and Time, Loss of Off-site power circuit 767 and B Emergency Diesel Generator automatic start supplying power to busses 16 and 17

06/03/2012, 0318 EST Busses 16 and 17 returned to off-site power (Circuit 7T)

06/03/2012, 0448 EST B Emergency Diesel Generator shut down

06/03/2012, 0607 EST Notification of B Emergency Diesel Generator start, event # 47988 under 10CFR50.72(b)(3)(iv)(A)

- E. OTHER SYSTEMS OR SECONDARY FUNCTIONS AFFECTED:
 - None.
- F. METHOD OF DISCOVERY:
 - Main Control Board Alarms associated with loss of offsite power and Emergency Diesel Generator start.
- G. MAJOR OPERATOR ACTION:
 - Operations responded to the loss of circuit 767 using abnormal operating procedure

 AP-ELEC.1 "Loss of 12A and/or 12B Busses"
 - Offsite power was restored to bus 12 B using ER-ELEC.1 "Restoration of Off-site Power"
 - Restored offsite power to pre-event lineup with O-6.9.2

NRC FORM 366A LICENSEE EVENT REPORT (LER) U.S. NUCLEAR REGULATORY COMMISSION CONTINUATION SHEET 1. FACILITY NAME 2. DOCKET 6. LER NUMBER 3. PAGE

R.E. Ginna Nuclear Power Plant	05000 244	YEAR SEQUENTIAL REV NO.	3 <u>O</u> F 3		

NARRATIVE

H. SAFETY SYSTEM RESPONSES:

- The B Emergency Diesel Generator operated properly and as expected.

II. CAUSE OF EVENT:

 The cause is raccoon interaction with power lines causing a temporary fault (CR-2012-003664). The raccoon caused a line to ground fault. Pilot wire differential and overcurrent relays operated, opening primary and secondary side transformer breakers for circuit 767.

III. ANALYSIS OF THE EVENT:

- This event is reportable as an LER under 10CFR50.73(a)(2)(iv)(A) due to the automatic start of B Emergency Diesel Generator and loading onto its safeguards buses not being part of a preplanned sequence during testing.
- There were no safety consequences as the redundant offsite circuit and Emergency Diesel Generators were operable and performed as designed.

IV CORRECTIVE ACTIONS:

- A. ACTION TAKEN TO RETURN AFFECTED SYSTEMS TO PRE-EVENT NORMAL STATUS
 - Offsite power configuration was changed to 100%/0% lineup with Circuit 7T supplying power to all four (4) safeguards buses. B Emergency Diesel Generator was later stopped and aligned for auto standby
 - Control room personnel were contacted by RG&E stating that circuit 767 was available. They then returned offsite power to 50%/50% lineup power using procedure O-6.9.2.
 - Inspection of equipment revealed no damage

B. ACTION TAKEN TO PREVENT RECURRENCE

- Development and installation of additional Animal Deterrent Devices is planned.

V. ADDITIONAL INFORMATION:

- A. FAILED COMPONENT(s)
 - None.

B. PREVIOUS LERS ON SIMILAR EVENTS

- A review of recent Ginna events involving the start of B Emergency Diesel Generator revealed only one other event (LER 1997-002) that was caused by an animal, and all the events occurred external to Ginna and Station 13a:
 - LER 2005-002
 - LER 2005-003
 - LER 2003-006
 - LER 1997-002
