| The licensee is a cardiology clinic located in Allen Park, Michigan. The licensee is authorized to use licensed material permitted by Title 10 Code of Federal Regulations 35.200. The licensee is staffed with two nuclear medicine technologists. The cardiology clinic performs approximately 28 diagnostic cardiology procedures per day using Tc99m from the local nuclear pharmacy in the form of unit doses. The licensee obtained an outside consultant to perform program audits, instrument calibrations, and radiation safety training. The licensee is operational Monday through Friday 0845-1600. |                |                     |  |                                     |  |  |  |
|   |                | Performance (       | Observations   |                                     |  |  |  |
| The inspection consisted of interview with licensee personnel, a review of select records, tour of the nuclear medicine department and independent measurements. Interviews conducted with the technologist revealed an adequate level of understanding of emergency and material handling procedures and techniques. Dose calibrator constancy checks, daily surveys, and package receipt were successfully performed and observed by the inspector. The inspector observed three administrations of licensed material.  |                |                     |  |                                     |  |  |  |
| One violation of NRC requirements was identified.   |                |                     |  |                                     |  |  |  |
