**Subject: Marine Turtle Removal Monthly Summary  
July 2012**

Dear Dr. Robbin Trindell,

Attached, please find the monthly summary of marine turtle removals for July 2012. This month, we captured thirty-three (33) *Caretta caretta*, ten (10) *Chelonia mydas*, and one (1) *Eretmochelys imbricata* in the intake canal of the St. Lucie power plant on Hutchinson Island. There were no mortalities or sea turtles sent for rehabilitation in July.

Throughout the month, the 5" barrier net experienced light to severe loads of jellyfish that entered into the intake canal, whereas algae entrainment was light. The temporary barrier net has performed as designed and no turtles have been observed beyond the 5-inch net. To date, Florida Power & Light and Morgan & Eklund, Inc. continue to work together on the installation of a permanent 5-inch barrier net.

The tag numbers and morphometric data for all turtles captured during the month have been included (see attachments/addendums). Also included is a spreadsheet for all captures, mortalities, injuries, and causal events delineated by species and by month for the year 2012. In addition, this spreadsheet tracks fresh scrapes incurred on captured turtles for the current month, as well as the entire year.

Please feel free to contact me with any questions.

Sincerely,

Steve Weege

1. REHAB (NON-CAUSAL). STSSN# DRC120401-01. Turtle underweight and lethargic with scutes sloughing off. Bone exposed on carapace from scute sloughing in two places (not fresh scrapes) and 5% of posterior carapace missing from an old injury (healed). Heavy epibiont load/coverage. SMCL is an estimate. MLC staff picked up turtle and transported it to the Loggerhead Marinelife Center in Juno for rehab.
2. REHAB (NON-CAUSAL). STSSN# JRG120409-01. Severely emaciated and lethargic. Recovered from 5-inch barrier net in the morning. Eyes sunken in and heartbeat visible (moribund state). Missing 15% from LRF and 10% from RRF (both healed). Heavy epibiont load. Turtle transported to LMC in Juno Beach by IRG biologists in the morning.
3. REHAB (NON-CAUSAL). STSSN #STW120411-01. Recovered floating at surface near barrier net (may have buoyancy issues). Perimeter of carapace broken at right anterior margin (14cm x 6cm; necrotic). Broken bone exposed with opening into body cavity. Lethargic & underweight with sloughing of scutes on carapace. Small 1cm hole in right anterior inframarginals of plastron. Transported by FWC sea turtle stranding coordinator (Amber) to MLC in Juno Beach.
4. Dermochelys coriacea. Relatively small leatherback sea turtle. Weight estimated at 450lbs (~200kg). Old discolored scar in left shoulder. CSCL was taken on the right side of keel. Over the keel curved length was 148.5. Fresh scrapes were minor. Biopsy taken.
5. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 9/18/11 and 4/26/12. New inconel tag #BBR134 inserted today in RFF.
6. RECAPTURE. Turtle was removed from the intake canal, tagged and released at Hutchinson Island on 1/12/07, 2/28/07, 7/12/07, 8/5/07, 9/8/07, 3/31/09, 12/2/09, 3/22/10, 10/12/10, 6/23/11, 10/20/11 and 4/27/12. Small deformity (lump) on last two vertebral scutes.
