*REV. 09/2010*

## *Executive Summary*

The 1996 amendments to the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) set forth a new mandate for NOAA's National Marine Fisheries Service (NMFS), regional fishery management councils (FMC), and other federal agencies to identify and protect important marine and anadromous fish habitat. The essential fish habitat (EFH) provisions of the Magnuson-Stevens Act support one of the nation's overall marine resource management goals - maintaining sustainable fisheries. Essential to achieving this goal is the maintenance of suitable marine fishery habitat quality and quantity. The FMCs, with assistance from NMFS, have delineated EFH for federally managed species. As new fishery management plans (FMPs) are developed, EFH for newly managed species will be defined as well. Federal action agencies which fund, permit, or carry out activities that may adversely affect EFH are required to consult with NMFS regarding the potential impacts of their actions on EFH and respond in writing to NMFS or FMC recommendations. In addition, NMFS and the FMCs may comment on and make recommendations to any state agency on their activities that may affect EFH. Measures recommended by NMFS or an FMC to protect EFH are advisory, not proscriptive.

On December 19, 1997, interim final rules, which specified procedures for implementation of the EFH provisions of the Magnuson-Stevens Act, were published in the Federal Register. These rules were subsequently revised and published as a final rule on January 17, 2002 (67 FR 2343). The rules, in two subparts, address requirements for FMP amendment, and detail the coordination, consultation, and recommendation requirements of the Magnuson-Stevens Act.

Within the area encompassed by the NMFS Southeast Region, EFH has been identified for hundreds of marine species covered by 20 FMPs, under the auspices of the Gulf of Mexico, South Atlantic, or Caribbean FMC or the NMFS. A generic FMP amendment delineating EFH for species managed by the Gulf of Mexico FMC was completed and approved in early 1999. The generic FMP subsequently was updated and revised in 2005 and became effective in January 2006 (70 FR 76216). In addition, EFH for highly migratory species managed by the NMFS is identified in a consolidated FMP (NMFS, 2006).

Wherever possible, NMFS intends to use existing interagency coordination processes to fulfill EFH consultations for federal agency actions that may adversely affect EFH. Provided certain regulatory specifications are met, EFH consultations will be incorporated into interagency procedures established under the National Environmental Policy Act, Endangered Species Act, Clean Water Act, Fish and Wildlife Coordination Act, or other applicable statutes. If existing processes cannot adequately address EFH consultation requirements, appropriate new procedures may be developed in cooperation with the NMFS. Programmatic consultations may be implemented or General Concurrences may be developed when program or project impacts are individually and cumulatively minimal in nature. Moreover, NMFS will work closely with federal agencies on programs requiring either expanded or abbreviated individual project consultations.

An effective, interagency EFH consultation process is vital to ensure that federal actions are consistent with the Magnuson-Stevens Act resource management goals. The NMFS will strive to work with action agencies to foster an understanding of EFH consultation requirements and identify the most efficient interagency mechanisms to fulfill agency responsibilities.

# ESSENTIAL FISH HABITAT:

## A Marine Fish Habitat Conservation Mandate for Federal Agencies Gulf of Mexico Region

### **Introduction**

This document has been prepared by the Southeast Regional Office of the NOAA's National Marine Fisheries Service (NMFS) to provide an overview of the essential fish habitat (EFH) provisions of the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act) and implementing rules. This document provides a brief legislative and regulatory background, introduces the concept of EFH, and describes consultation requirements. Consistent with elements of the NMFS's National Habitat Plan, Strategic Plan, and Habitat Conservation Policy, this document is intended to: provide a mechanism for information exchange; foster interagency discussion and problem-solving; and enhance communication and coordination among the NMFS, Gulf of Mexico Fishery Management Council (GMFMC), and affected state and federal agencies. Ultimately, improved interagency coordination and consultation will enhance the ability of the agencies, working cooperatively, to sustain healthy and productive marine fishery habitats.

### **Legislative and Regulatory Background**

The 1996 amendments to the Magnuson-Stevens Act (excerpted at Appendix 1) set forth a new mandate to identify and protect important marine and anadromous fisheries habitat. The regional fishery management councils (FMC), with assistance from NMFS, are required to delineate EFH in fishery management plans (FMP) or FMP amendments for all federally managed fisheries. Federal action agencies which fund, permit, or carry out activities that may adversely affect EFH are required to consult with NMFS regarding potential adverse impacts of their actions on EFH, and respond in writing to NMFS and FMC recommendations. In addition, NMFS is directed to comment on any state agency activities that would impact EFH adversely.

The purpose of addressing habitat in this act is to further one of the nation's important marine resource management goals - maintaining sustainable fisheries. Achieving this goal requires the long-term maintenance of suitable marine fishery habitat quality and quantity. Measures recommended to protect EFH by NMFS or an FMC are advisory, not proscriptive. However, federal agencies that do not adopt EFH conservation recommendations must provide a written explanation setting forth the scientific basis for that decision. An effective EFH consultation process is vital to ensuring that federal actions are consistent with the Magnuson-Stevens Act resource management goals.

Guidance and procedures for implementing the 1996 amendments of the Magnuson-Stevens Act were provided through an interim final rule established by the NMFS in 1997 and published as a final rule in 2002 (50 CFR Sections 600.805 - 600.930). These rules specify that FMP amendments be prepared to describe and identify EFH and identify appropriate actions to conserve and enhance those habitats. In addition, the rules establish procedures to promote the protection of EFH through interagency coordination and consultation on proposed federal and state actions.

## EFH Designation

The Magnuson-Stevens Act requires that EFH be identified for all fisheries that are federally managed. This includes species managed by the FMCs under federal FMPs, as well as those managed by the NMFS under FMPs developed by the Secretary of Commerce. EFH is defined in the Magnuson-Stevens Act as "...those waters and substrate necessary to fish for spawning, breeding, feeding, or growth to maturity." The rules promulgated by the NMFS in 1997 and 2002 further clarify EFH with the following definitions: **waters** - aquatic areas and their associated physical, chemical, and biological properties that are used by fish and may include aquatic areas historically used by fish where appropriate; **substrate** - sediment, hard bottom, structures underlying the waters, and associated biological communities; **necessary** - the habitat required to support a sustainable fishery and the managed species' contribution to a healthy ecosystem; and **spawning, breeding, feeding, or growth to maturity** - stages representing a species' full life cycle. EFH may be a subset of all areas occupied by a species. Acknowledging that the amount of information available for EFH determinations will vary for the different life stages of each species, the rules direct the FMCs to use the best information available, to take a risk averse approach to designations, and to be increasingly specific and narrow in their delineations as more refined information becomes available.

Applicable FMP authorities for the Gulf of Mexico, and species covered by those FMPs for which EFH was designated, are listed in Appendices 2 and 3. Species listed are those for which data were adequate or could be inferred to define and describe EFH. The listed species collectively occur throughout the areas managed by the NMFS and GMFMC; therefore, inclusion of additional species for which life history data are limited would be unlikely to encompass a greater geographic area. Representative areas designated as EFH by the GMFMC NMFS are presented in Appendix 4.

The rules also direct NMFS and FMCs to consider a second, more limited habitat designation for each species in addition to EFH. Habitat Areas of Particular Concern (HAPC) are described in the rules as subsets of EFH which are rare, particularly susceptible to human-induced degradation, especially ecologically important, or located in an environmentally stressed area. In general, HAPCs include high value intertidal and estuarine habitats, offshore areas of high habitat value or vertical relief, and habitats used for migration, spawning, and rearing of fish and shellfish. Areas identified as HAPC by the NMFS and the GMFMC are presented in Appendix 5. For a complete description of designated HAPC the reader should reference the GMFMC's 2005 generic amendment and the supporting environmental impact statement (see Appendix 8). HAPCs are not afforded any additional regulatory protection under the Magnuson-Stevens Act; however, federal actions with potential adverse impacts to HAPC will be more carefully scrutinized during the consultation process and will be subject to more stringent EFH conservation recommendations.

Designating the spatial and seasonal extent of EFH has taken careful and deliberate consideration by NMFS and the GMFMC. The effort to identify and delineate EFH was a rigorous process that involved advice and input by numerous state and federal agencies and the public at large. Appendix 6 presents generalized EFH designations based on species or species assemblage habitat requirements developed by the GMFMC. Summaries of highly migratory species and the associated categories of EFH for each life stage based on information developed by the NMFS are displayed in Appendix 7. These two appendices are intended to provide a convenient summary of habitat and geographic information on species managed by the GMFMC as well as for species managed by the NMFS, where EFH has been identified for the managed species within oceanic, coastal, and estuarine habitats of the Gulf of Mexico. For detailed discussions and descriptions, the reader should refer to the relevant FMP amendments and supporting environmental impact documents.

Additional sources of information, useful for preparing EFH assessments, and to further one's understanding of EFH designations and federally managed fishery resources, are available through the NMFS and GMFMC. Appendix 8 provides citations for the FMPs for the Gulf of Mexico and

identifies web sites containing information on the Magnuson-Stevens Act, the NMFS final rules governing EFH designation and consultation, and data on specific managed fisheries and associated habitats. NMFS Southeast Region and FMC points of contact for activities within the Gulf of Mexico are identified in Appendix 9.

Besides delineating EFH, the FMPs produced for managed fisheries in the Gulf of Mexico identify and describe potential threats to EFH, which include threats from development, fishing, or any other sources. Also identified are recommend EFH conservation and enhancement measures. Guidelines used in the development of EFH amendment sections for each of these issues were established by the EFH rules.

NMFS and FMCs also are required to implement management measures to minimize, to the extent practicable, any adverse impacts to EFH caused by fishing gears. Those measures can include area closures, gear restrictions, seasonal restrictions, and other measures designed to avoid or minimize degradation of EFH attributable to fishing activities. Various protective measures have been imposed for some fisheries under NMFS and FMC jurisdiction and FMCs are coordinating with the NMFS to identify research necessary to determine where additional conservation measures might be appropriate.

### **EFH Consultations**

In the regulatory context, one of the most important provisions of the Magnuson-Stevens Act for conserving fish habitat is that which requires consultation when actions to be permitted, funded, or undertaken by a federal agency may adversely impact EFH. The consultation requirements in the Magnuson-Stevens Act direct federal agencies to consult with NMFS when any of their activities may have an **adverse affect** on EFH and defines **adverse affect** as “any impact that reduces quality and/or quantity of EFH...[and] may include direct (e.g., contamination or physical disruption), indirect (e.g., loss of prey, reduction in species’ fecundity), site-specific or habitat wide impacts, including individual, cumulative, or synergistic consequences of actions.”

The consultation provisions have caused some concern among federal action agencies regarding potential increases in workload and the regulatory burden on the public. NMFS has addressed these concerns in the EFH rules by emphasizing and encouraging the use of existing environmental review processes and time frames. Provided the specifications outlined in the EFH regulations are met, consultations should be incorporated into interagency procedures previously established under the National Environmental Policy Act, Endangered Species Act, Clean Water Act, Fish and Wildlife Coordination Act, or other applicable statutes.

To incorporate EFH consultations into coordination, consultation and/or environmental review procedures already required by other statutes, three criteria must be met:

- (1) The existing process must provide NMFS with timely notification of the action;
- (2) Notification of the action must include an *EFH Assessment* of the impacts of the proposed action as outlined in the EFH rules; and
- (3) NMFS must have completed a written *finding* that the existing coordination process satisfies the requirements of the Magnuson-Stevens Act.

An *EFH Assessment* is a critical review of the proposed project and its potential impacts to EFH. As set forth in the rules, *EFH Assessments* must include: (1) a description of the proposed action; (2) an analysis of the effects, including cumulative effects, of the action on EFH, the managed species, and associated species by life history stage; (3) the federal agency's views regarding the effects of the action on EFH; and (4) proposed mitigation, if applicable. If appropriate, the assessment should also include the results of an on-site inspection, the views of recognized experts on the habitat or species affects, a literature review, an analysis of alternatives to the proposed action, and any other relevant information.

Once NMFS learns of a federal or state activity that may have an adverse effect on EFH, NMFS is required to develop EFH conservation recommendations for the activity, even if consultation has not been initiated by the action agency. These recommendations may include measures to avoid, minimize, mitigate, or otherwise offset adverse effects on EFH and are to be provided to the action agency in a timely manner. The Magnuson-Stevens Act also authorizes FMCs to comment on federal and state projects, and directs FMCs to comment on any project that may substantially impact EFH. The Magnuson-Stevens Act requires that federal agencies respond to EFH conservation recommendations of the NMFS and FMCs in writing and within 30 days.

Consultations may be conducted through programmatic, general concurrence, or project specific mechanisms. Evaluation at a programmatic level may be appropriate when sufficient information is available to develop EFH conservation recommendations and address all reasonably foreseeable adverse impacts under a particular program area. General Concurrences can be utilized for categories of similar activities having minimal individual and cumulative impacts. Programmatic and General Concurrence consultations minimize the need for individual project consultation in most cases because NMFS has determined that the actions will likely result in no more than minimal adverse effects, and conservation measures would be implemented. For example, NMFS might agree to a General Concurrence for the construction of docks or piers which, with incorporation of design or siting constraints, would minimally affect federally managed fishery resources and their habitats.

Consultations at a project-specific level are required when critical decisions are made at the project implementation stage, or when sufficiently detailed information for development of EFH conservation recommendations does not exist at the programmatic level. To facilitate project-specific consultations, NMFS and the action agency should discuss how existing review or coordination processes can be used to accomplish the EFH consultation. With agreement on how existing coordination mechanisms will be used, the NMFS will transmit a *findings* letter to the action agency describing the conduct of EFH consultation within existing project review frameworks. To date, more than 20 *findings* with federal and state partners in the southeast have been completed.

Project specific consultations must follow either the abbreviated or expanded procedures. Abbreviated consultations allow NMFS to quickly determine whether, and to what degree, a federal action may adversely impact EFH, and should be used when impacts to EFH are expected to be minor. For example, the abbreviated consultation procedure would be used when the adverse effect of an action or proposed action could be alleviated through minor design or operational modifications, or the inclusion of measures to offset unavoidable adverse impacts.

Expanded consultations allow NMFS and a federal action agency the maximum opportunity to work together in the review of an activity's impact on EFH and the development of EFH conservation recommendations. Expanded consultation procedures must be used for federal actions that would result in substantial adverse effects to EFH. Federal action agencies are encouraged to contact NMFS at the earliest opportunity to discuss whether the adverse effect of a proposed action makes expanded consultation appropriate. In addition, it may be determined after review of an abbreviated consultation that a greater level of review and analysis would be appropriate and that review through expanded consultation procedures should be employed. Expanded consultation procedures provide

additional time for the development of conservation recommendations, and may be appropriate for actions such as the construction of large marinas or port facilities, or activities subject to preparation of an environmental impact statement.

The Magnuson-Stevens Act mandates that a federal action agency must respond in writing to EFH conservation recommendations from NMFS and FMCs within 30 days of receiving those recommendations. The rules require that such a response be provided at least 10 days prior to final approval of the action, if a decision by the federal agency is required in fewer than 30 days and that decision is inconsistent with the recommendations of the NMFS. The response must include a description of measures proposed by the agency for avoiding, mitigating, or offsetting the impact of the activity on EFH. In the case of a response that is inconsistent with NMFS conservation recommendations, the agency must explain its reasons for not following the recommendations, including the scientific rationale for any disagreements with NMFS over the anticipated effects of the proposed action and the measures needed to offset such effects.

The regulations provide an important opportunity to resolve critical and outstanding EFH issues prior to an action agency rendering a final decision. When an agency decision is inconsistent with NMFS conservation recommendations, the NMFS Assistant Administrator may request a meeting with the head of the action agency to further discuss the project and attempt to achieve a greater level of protection for EFH and federally managed fisheries. The process for higher-level review of proposed actions is not specified in the regulations; rather it is to be addressed on an agency-by-agency basis. In keeping with NMFS's effort to minimize the regulatory burden of EFH consultation requirements, review by the Assistant Administrator and action agency representative should be streamlined and tightly focused.

## **Conclusion**

The EFH mandates of the Magnuson-Stevens Act represent an integration of fishery management and habitat management by stressing the dependency of healthy, productive fisheries on the maintenance of viable and diverse estuarine and marine ecosystems. Federal action agencies are required to consult with the NMFS whenever a construction, permitting, funding, or other action may adversely affect EFH. The EFH consultation process will ensure that federal agencies explicitly consider the effects of their actions on important habitats, with the goal of supporting the sustainable management of marine fisheries. The NMFS is committed to working with federal and state agencies to implement these mandates effectively and efficiently, with the ultimate goal of sustaining of the nation's fishery resources.

**Appendix 1. Selected Text from the Magnuson-Stevens Fishery Conservation and Management Act (16 U.S.C. 1855 et seq)**

SEC. 305. OTHER REQUIREMENTS AND AUTHORITY

104-297

(b) FISH HABITAT.

(1) (A) The Secretary shall, within 6 months of the date of enactment of the Sustainable Fisheries Act, establish by regulation guidelines to assist the Councils in the description and identification of essential fish habitat in fishery management plans (including adverse impacts on such habitat) and in the consideration of actions to ensure the conservation and enhancement of such habitat. The Secretary shall set forth a schedule for the amendment of fishery management plans to include the identification of essential fish habitat and for the review and updating of such identifications based on new scientific evidence or other relevant information.

(B) The Secretary, in consultation with participants in the fishery, shall provide each Council with recommendations and information regarding each fishery under that Council's authority to assist it in the identification of essential fish habitat, the adverse impacts on that habitat, and the actions that should be considered to ensure the conservation and enhancement of that habitat.

(C) The Secretary shall review programs administered by the Department of Commerce and ensure that any relevant programs further the conservation and enhancement of essential fish habitat.

(D) The Secretary shall coordinate with and provide information to other Federal agencies to further the conservation and enhancement of essential fish habitat.

(2) Each Federal agency shall consult with the Secretary with respect to any action authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken, by such agency that may adversely affect any essential fish habitat identified under this Act.

(3) Each Council--

(A) may comment on and make recommendations to the Secretary and any Federal or State agency concerning any activity authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken, by any Federal or State agency that, in the view of the Council, may affect the habitat, including essential fish habitat, of a fishery resource under its authority; and

(B) shall comment on and make recommendations to the Secretary and any Federal or State agency concerning any such activity that, in the view of the Council, is likely to substantially affect the habitat, including essential fish habitat, of an anadromous fishery resource under its authority.

(4) (A) If the Secretary receives information from a Council or Federal or State agency or determines from other sources that an action authorized, funded, or undertaken, or proposed to be authorized, funded, or undertaken, by any State or Federal agency would adversely affect any essential fish habitat identified under this Act, the Secretary shall recommend to such agency measures that can be taken by such agency to conserve such habitat.

(B) Within 30 days after receiving a recommendation under subparagraph (A), a Federal agency shall provide a detailed response in writing to any Council commenting under paragraph (3) and the Secretary regarding the matter. The response shall include a description of measures proposed by the agency for avoiding, mitigating, or offsetting the impact of the activity on such habitat. In the case of a response that is inconsistent with the recommendations of the Secretary, the Federal agency shall explain its reasons for not following the recommendations.

## Appendix 2. Fishery Management Plans and Managed Species for the Gulf of Mexico area.

### GULF OF MEXICO FISHERY MANAGEMENT COUNCIL

#### Shrimp Fishery Management Plan

brown shrimp - *Farfantepenaeus aztecus*  
pink shrimp - *F. duorarum*  
royal red shrimp - *Pleoticus robustus*  
white shrimp - *Litopenaeus setiferus*

#### Red Drum Fishery Management Plan

red drum - *Sciaenops ocellatus*

#### Reef Fish Fishery Management Plan

almaco jack – *Seriola rivoliana*  
anchor tilefish - *Caulolatilus intermedius*  
banded rudderfish – *S. zonata*  
blackfin snapper - *Lutjanus buccanella*  
blackline tilefish - *Caulolatilus cyanops*  
black grouper- *Mycteroperca bonaci*  
blueline tilefish – *C. microps*  
cubera snapper – *L. cyanopterus*  
dog snapper – *L. jocu*  
dwarf sand perch - *Diplectrum bivittatum*  
gag grouper - *M. microlepis*  
goldface tilefish – *C. chrysops*  
goliath grouper - *Epinephelus itajara*  
gray snapper – *L. griseus*  
gray triggerfish - *Balistes capriscus*  
greater amberjack – *S. dumerili*  
hogfish - *Lachnolaimus maximus*  
lane snapper - *Lutjanus synagris*  
lesser amberjack - *S. fasciata*  
mahogany snapper – *L. mahogoni*  
marbled grouper – *E. inermis*  
misty grouper – *E. mystacinus*  
mutton snapper – *L. analis*  
Nassau grouper – *E. striatus*  
queen snapper - *Etelis oculatus*  
red hind - *Epinephelus guttatus*  
red grouper – *E. morio*  
red snapper - *L. campechanus*  
rock hind – *E. adscensionis*  
sand perch - *Diplectrum formosum*  
scamp grouper - *M. phenax*  
schoolmaster – *L. apodus*  
silk snapper – *L. vivanus*  
snowy grouper – *E. niveatus*  
speckled hind - *E. drummondhayi*  
tilefish - *Lopholatilus chamaeleonticeps*  
vermilion snapper - *Rhomboplites aurorubens*  
Warsaw grouper – *E. nigritus*  
wenchman - *Pristipomoides aquilonaris*  
yellowedge grouper *E. lavolimbatus*  
yellowfin grouper – *M. venenosa*  
yellowmouth grouper – *M. interstitialis*  
yellowtail snapper - *Ocyurus chrysurus*

#### Stone Crab Fishery Management Plan

Florida stone crab - *Menippe mercenaria*  
gulf stone crab – *M. adina*

#### Spiny Lobster Fishery Management Plan

spiny lobster - *Panulirus argus*  
slipper lobster - *Scyllarides nodife*

#### Coral and Coral Reef Fishery Management Plan

varied coral species and coral reef communities comprised of several hundred species

#### Coastal Migratory Pelagic Fishery Management Plan

cobia - *Rachycentron canadum*  
king mackerel – *Scomberomorus cavalla*  
Spanish mackerel - *S. maculatus*

### Appendix 3. Species Managed in the Gulf of Mexico under Federally Implemented Fishery Management Plans.

#### Tuna

albacore - *Thunnus alalunga*  
Atlantic bigeye - *T. obesus*  
Atlantic bluefin - *T. thynnus*  
Atlantic yellowfin - *T. albacares*  
skipjack - *Katsuwonus pelamis*

#### Swordfish

swordfish - *Xiphias gladius*

#### Billfish

blue marlin - *Makaira nigricans*  
sailfish - *Istiophorus platypterus*  
white marlin - *T. albidus*  
longbill spearfish - *Tetrapturus pfluegeri*

#### Large Coastal Sharks

basking shark - *Cetorhinus maximus*  
great hammerhead - *Sphyrna mokarran*  
scalloped hammerhead - *S. lewini*  
smooth hammerhead - *S. zygaena*  
white shark - *Carcharodon carcharias*  
nurse shark - *Ginglymostoma cirratum*  
bignose shark - *Carcharhinus altimus*  
blacktip shark - *C. limbatus*  
bull shark - *C. leucas*  
Caribbean reef shark - *C. perezi*  
dusky shark - *C. obscurus*  
Galapagos shark - *C. galapagensis*  
lemon shark - *Negaprion brevirostris*  
narrowtooth shark - *C. brachyurus*  
night shark - *C. signatus*  
sandbar shark - *C. plumbeus*  
silky shark - *C. falciformis*  
spinner shark - *C. brevipinna*  
tiger shark - *Galeocerdo cuvieri*  
bigeye sand tiger - *Odontaspis noronhai*  
sand tiger shark - *O. taurus*  
whale shark - *Rhinocodon typus*

#### Small Coastal Sharks

Atlantic angel shark - *Squatina dumerili*  
bonnethead - *Sphyrna tiburo*  
Atlantic sharpnose - *R. terraenovae*  
blacknose shark - *C. acronotus*  
Caribbean sharpnose shark - *R. porosus*  
finetooth shark - *C. isodon*  
smalltail shark - *C. porosus*

#### Pelagic Sharks

bigeye sixgill shark - *Hexanchus vitulus*  
sevengill shark - *Heptranchias perlo*  
sixgill shark - *H. griseus*  
longfin mako shark - *Isurus paucus*  
porbeagle shark - *Lamna nasus*  
shortfin mako shark - *I. oxyrinchus*  
blue shark - *Prionace glauca*  
oceanic whitetip shark - *C. longimanu*  
bigeye thresher shark - *Alopias superciliosus*  
common thresher shark - *A. vulpinus*

**Appendix 4. Representative Categories of Essential Fish Habitat Identified in the Fishery Management Plan Amendment of the Gulf of Mexico Fishery Management Council. (Generally, EFH for species managed under the NMFS Billfish and Highly Migratory Species plans falls within the marine and estuarine water column habitats designated by the Council)**

## **Appendix 6. EFH Designations for Species Managed by the Gulf of Mexico Fishery Management Council.<sup>1</sup>**

Red Drum FMP – EFH for red drum consists of all Gulf of Mexico estuaries; waters and substrates extending from Vermilion Bay, Louisiana to the eastern edge of Mobile Bay, Alabama out to depths of 25 fathoms; waters and substrates extending from Crystal River, Florida to Naples, Florida between depths of 5 and 10 fathoms; waters and substrates extending from Cape Sable, Florida to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council between depths of 5 and 10 fathoms.

Reef Fish FMP – EFH for reef fish consists of Gulf of Mexico waters and substrates extending from the US/Mexico border to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council from estuarine waters out to depths of 100 fathoms.

Coastal Migratory Pelagics FMP – EFH for coastal migratory pelagics consists of Gulf of Mexico waters and substrates extending from the US/Mexico border to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council from estuarine waters out to depths of 100 fathoms.

Shrimp FMP – EFH for shrimp consists of Gulf of Mexico waters and substrates extending from the US/Mexico border to Fort Walton Beach, Florida from estuarine waters out to depths of 100 fathoms; waters and substrates extending from Grand Isle, Louisiana to Pensacola Bay, Florida between depths of 100 and 325 fathoms; waters and substrates extending from Pensacola Bay, Florida to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council out to depths of 35 fathoms, with the exception of waters extending from Crystal River, Florida to Naples, Florida between depths of 10 and 25 fathoms and in Florida Bay between depths of 5 and 10 fathoms.

Stone Crab FMP – EFH for stone crab consists of Gulf of Mexico waters and substrates extending from the US/Mexico border to Sanibel, Florida from estuarine waters out to depths of 10 fathoms; waters and substrates extending from Sanibel, Florida to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council from estuarine waters out to depths of 15 fathoms.

Spiny Lobster FMP – EFH for spiny lobster consists of Gulf of Mexico waters and substrates extending from Tarpon Springs, Florida to Naples, Florida between depths of 5 and 10 fathoms; waters and substrates extending from Cape Sable, Florida to the boundary between the areas covered by the Gulf of Mexico Fishery Management Council and the South Atlantic Fishery Management Council out to depths of 15 fathoms.

Coral FMP – EFH for coral consists of the total distribution of coral species and life stages throughout the Gulf of Mexico including the East and West Flower Garden Banks, Florida Middle Grounds, southwest tip of the Florida reef tract, and predominant patchy hard bottom offshore of Florida from approximately Crystal River south to the Keys, and scattered along the pinnacles and banks from Texas to Mississippi, at the shelf edge.
