Subject: DIR for Waterford

On August 28, 2012, based on our review of available information gathered in discussions with State, tribal, and local government agencies response organizations, FEMA has concluded that impediments may exist to offsite radiological emergency preparedness within the Waterford Nuclear Generating Station EPZ. This requires further evaluation to verify appropriate measures can continue to be taken to protect the health and safety of the public in the event of a radiological emergency. FEMA is initiating a Disaster Initiated Review of offsite emergency preparedness issues within the [Nuclear Power Plant] 10-mile emergency planning zone.
