

UNITED STATES  
NUCLEAR REGULATORY COMMISSION  
REGION IV  
1600 EAST LAMAR BLVD  
ARLINGTON, TEXAS 76011-4511

September 4, 2012

Mr. Eric W. Olson  
Site Vice President  
Entergy Operations, Inc.  
River Bend Station  
5485 US Highway 61  
St. Francisville, LA 70775

SUBJECT: MID-CYCLE ASSESSMENT LETTER FOR RIVER BEND STATION  
(REPORT 05000458/2012006)

Dear Mr. Olson:

On August 15, 2012, the NRC completed its mid-cycle performance review of River Bend Station. The NRC reviewed the most recent quarterly performance indicators (PIs) in addition to inspection results and enforcement actions from July 1, 2011, through June 30, 2012. This letter informs you of the NRC's assessment of your facility during this period and its plans for future inspections at your facility. The security inspection plan will be sent via separate correspondence.

The NRC determined the performance at River Bend Station during the most recent quarter was within the Regulatory Response column of the NRC's Reactor Oversight Process (ROP) Action Matrix. During the second quarter of 2012, the Scrams with Complications Performance Indicator crossed the Green-White threshold and remained White at the end of the assessment period. The performance indicator turned White following a complicated reactor scram on May 24, 2012.

Consistent with the guidance in Inspection Manual Chapter 0305, "Operating Reactor Assessment Program," the NRC will conduct a supplemental inspection using Inspection Procedure 95001, "Supplemental Inspection for One or Two Inputs in a Strategic Performance Area." The objectives of this supplemental inspection are to provide assurance that the root causes and contributing causes of risk-significant performance issues are understood, the extent of condition and extent of cause of risk-significant performance issues are identified, and your corrective actions for risk-significant performance issues are sufficient to address the root and contributing causes and prevent recurrence. The NRC will perform this inspection after you notify us, in writing, of your readiness for inspection.

In our assessment letter dated March 5, 2012, (ML 120610414), the NRC identified a cross-cutting theme in the Safety Conscious Work Environment component of Environment for Raising Concerns. Specifically, issuance of the Confirmatory Order dated August 22, 2011, that involved discrimination constituted a theme. The cross-cutting aspect was related to behavior and actions that encourage free flow of information related to raising nuclear safety issues such that personnel raise nuclear safety issues without fear of retaliation [S.1(a)]. At that time, the

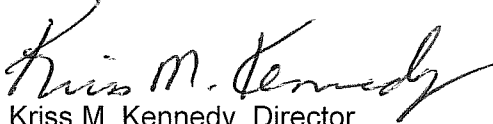

NRC determined that substantive cross-cutting issue associated with S.1 (a) did not exist because the NRC did not have concerns with the actions you committed to take to address the theme. The NRC will continue to monitor your staff's effort and progress in addressing the theme until the theme criteria no longer exists and Confirmatory Order actions are complete.

The enclosed inspection plan lists the inspections scheduled through December 31, 2013. Routine inspections performed by resident inspectors are not included in the inspection plan. In addition to the baseline inspections, consistent with the Agency's actions related to Fukushima, the NRC will perform TI-187, "Inspection of Near-Term Task Force Recommendation 2.3 Flooding Walkdowns," and TI-188, "Inspection of Near-Term Task Force Recommendation 2.3 Seismic Walkdowns." The inspections listed during the last nine months of the inspection plan are tentative and may be revised at the end-of-cycle performance review. The NRC provides the inspection plan to allow for the resolution of any scheduling conflicts and personnel availability issues. The NRC will contact you as soon as possible to discuss changes to the inspection plan should circumstances warrant any changes. This inspection plan does not include security related inspections, which will be sent via separate, non-publicly available correspondence.

In accordance with 10 CFR 2.390 of the NRC's "Rules of Practice," a copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

Please contact Vince Gaddy at 817-200-1144 with any questions you may have regarding this matter.

Sincerely,

  
Kriss M. Kennedy, Director  
Division of Reactor Projects
