Subject: Indian Point

9/6/12

I do NOT think that we should close Indian Point , at least not until there is adequate electrical supply from other sources to supply electrical power during PEAK POWER NEEDS such as during the very hot and humid days in the summer. Emphasis should be placed on repair not on destruction. I think that organizations, like yours, are all to quick to be negative without thinking of all of the consequences.

I am sure that things can be done to repair the problems. That should be the first priority.

Gerald Weinberger, M.D.
