**Subject:** CLOSE INDIAN POINT

I am nearby to this awful and dangerous plant.

It is NOT safe – that is a lie. It is old, with old technology. Although the NRC has the audacity to rate this as one of the safest plants in the nation – the truth is that it constantly fails and we are not even told about most failures. It is actually one of the least safe plants in the world. The possibility for a disaster is very real and is ignored by Homeland Security, the NRC and Entergy. The evacuation plan rests on the sounding of sirens (which don't usually work and can't really be heard – it is actually no warning and we are on our own). Sirens won't protect or help us in a failure at all. There would be no escaping.

It is NOT run with the environment in mind, that's a lie. It is terrible for the river and the wildlife that live near it.

It is NOT absolutely required for our energy needs – that is a lie. It does not produce appx 20% of our regional electricity that was stated – it produces MUCH LESS at a HIGH COST.

It is NOT a huge job benefit – that is a lie. It is also an unsafe work environment.

It is NOT safely storing the radioactive waste – that is a lie. There is even unlawful storage of some additional very dangerous waste that was never correctly disposed of.

It is simply run for PROFIT without caring about the people who work there and the people that live around it.

THE TRUTH IS THAT IT IS RUN BY A VERY CORRUPT AND UNCARING COMPANY, WITH BACKING FROM THE NRC, THAT IS NOT A GOOD NEIGHBOR AND THAT CONSTANTLY AND CONSISTANTLY FIGHTS ANY ATTEMPT TO BE EVEN A LITTLE RESPONSIBLE.

It's about time that the government took the right stand on this issue.

Please Close This Plant Immediately.

Thank you,
