I looked at your license and currently you are authorized to possess 3 gauges containing Ra-226. If you want to acquire a fourth one, you must request an amendment to your license to increase this limit. You can just write a letter to NRC requesting increase in possession limit. Please specify the model number of the gauge you are acquiring.

Please feel free to call me at 610 337 5364 if you have any questions about this process. Our mailing address has changed. The new address is:

First you must ensure that your license authorizes you to possess that particular model. NRC licenses specify maximum possession limits for each isotope. You must not exceed these limits.
