General Comment

On June 8, 2012, Riverkeeper and other organizations won a landmark U.S. Court of Appeals decision nullifying the Nuclear Regulatory Commission's "Waste Confidence Rule," that allowed U.S. nuclear reactors to store highly radioactive nuclear waste on site. This now-invalidated rule presumed that waste stored at reactors would go to a national nuclear waste dump someday and that the storage of spent fuel at individual reactors is temporary and causes "no significant environmental impact."

Because of the landmark court victory, there is no longer any legal basis for plants like Indian Point in New York to avoid studying the environmental impacts of long-term nuclear waste storage in fuel pools or dry storage. At Indian Point, spent fuel has leaked carcinogenic nuclear waste into groundwater and the Hudson River, and its unfortified storage structure has been considered as a target of terrorists. The Court's decision requires the Nuclear Regulatory Commission to address the risks of nuclear waste disposal before any U.S. nuclear plant, including Indian Point, may be licensed or re-licensed. I urge you to address these real risks at Indian Point and all other nuclear facilities before we witness the next accident at a power plant or, heaven forbid, a terrorist attack, which we will all regret. This reckoning is long overdue.
