## Submitter Information

**Name:** Susan Didrichsen

**Address:**  
NY,

## General Comment

It is more than time for us to move past these dangerous forms of energy that create toxic waste that never goes away. The energy and jobs we need have to be tempered by the effect same have on the environment - we simply have to acknowledge that we can't separate the two. And it's entirely possible for us to create energy and job AND protect the environment that we all are part of. Solar, wind, hydrogen and free energy are the forms of energy that we must move toward. Nuclear energy is part of an old paradigm, an old way of thinking, an old world. We don't want to wind up like Mad Max, destroying everything because we refused to understand the implications of our actions.
