INDIAN POINT PARK BOUGHT BY EDISON

Utility to Build Huge Power Plant on Site in Future—Recreation Area Stays

Special to The New York Times.

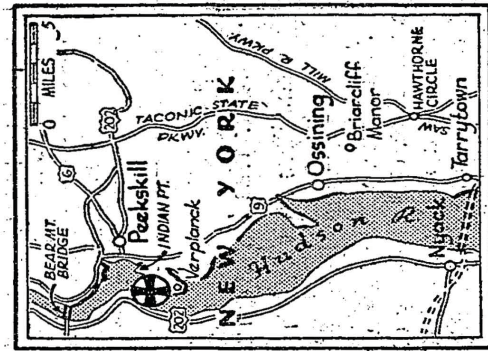

MOUNT VERNON, N. Y., Oct. 8—The Consolidated Edison Company of New York will build a multimillion-dollar electric generating plant, with provision for possible conversion to the use of atomic power, on the banks of the Hudson River near Peekskill.

The corporation, anticipating a 300-per cent increase in the demand for electric power in Westchester County in the next sixteen years, completed negotiations here today to buy the 340-acre Indian Point Amusement

Park in the Village of Buchanan. The site is conveniently situated from the standpoint of fuel transportation between the New York Central Railroad tracks and the Hudson River.

Louis A. Scofield, vice president in charge of Westchester operations for Consolidated Edison, said that the project was in line with the utility's long-range program, but that construction of the power station would await consumption demand. He estimated that Westchester's population would increase from its present 683,400 to 800,000 by 1970 and that the present demand for 220,000 kilowatts would rise to 680,000 kilowatts.

Mr. Scofield explained that the increased need for power would result not only from population growth but from the broadening use of electricity in industry and the home. He cited improved lighting in home and office and the increased use of electrically operated household appliances, such as air-conditioners, clothes

washers and driers, and deep freezers. He added that color television receivers required twice

the power consumed for black-and-white reception.

Consolidated Edison, he said, was interested in the possible use of atomic energy for generating power, but pending further legislation and scientific developments that would make the use of that energy feasible, his corporation would use the cheapest fuel available for the projected Indian Point plant. Oil or coal, he said, could be transported conveniently to the station by rail or water, and natural gas could be tapped from a pipeline of the Algonquin Gas Transmission Company that runs through the Indian Point acreage.

Consolidated's records for Westchester show that the corporation sold 218,000,000 kilowatt hours of electricity in 1953 and 820,000,000 last year. The company expects to sell 3,000,000,000 kilowatt hours by 1970.

The corporation's service area of about 600 square miles includes the five boroughs of New York City, except the Rock-

aways, and about 80 per cent of Westchester County.

Emanuel D. Kelmans of 152 West forty-second Street, New York, owner and operator of the Indian Point Amusement Park, which he bought several years ago from the operators of the Hudson River Dayline, has retained a lease under which he can continue to operate the recreation center for at least two years. The price that Consolidated Edison paid for the property was not revealed.
