FOIA REQUEST

2013-0048

From: C.O.A.S.T Alliance (Citizens Opposing Acoustic Seismic Testing) et al.

12/3/12  
Kilgore

Attention: Nuclear Regulatory Commission  
California State Lands Commission  
PG&E

It has come to our attention that PG&E has been conducting LESS (low energy seismic survey) tests in the coastal marine environment in the vicinity of the Diablo Canyon Nuclear Power Plant in response to the NRC's request and under a permit issued by the California State Lands Commission.

This is a request for related documents and information under the Federal Freedom of Information Act as to the Nuclear Regulatory Commission and the California Public Records Act as to the State Lands Commission.

The documents include:

1. Any federal and state permits that PG&E is operating under to conduct seismic surveys.
2. State mitigated negative declaration (MND)
3. Any addenda and/or update that would render the original 1984 MND valid.
4. Contracts with testing subcontractors to PG&E showing the scope of work including dates of testing, any technologies used, and prescribed decibel levels of acoustic testing to be done.
5. Ships logs from the vessels that did the work for all time periods that seismic testing was in progress
6. Federal permits for marine mammal harassment – Incidental Harassment Authorization, from all pertinent NOAA agencies.

We would also like a list of damage claims by fisherman relating to the LESS testing time period, including any that have been satisfied.

These requests are reasonable and should be satisfied within 10 working days from the date of this request.

Please send all data to:
