General Comment

I have been reading about the toxicity of nuclear waste since 1968 in Scientific American when it was a real science journal. Nuclear waste cannot be safely stored or decontaminated and is a hazard for every lifeform on Earth. The only answer is to close all nuclear power plants and develop hard storage for waste with monitoring the length of half life.

Anyone who says there are safe ways to store and process nuclear materials is LYING, and knows they are lying. When the New Madrid Fault explodes for another, or (3) 8.0+ earthquake/s and the nuke sites along the Mississippi are dumped into the river and end up in the Gulf, are you, or anyone making these decisions going to be responsible for species ending catastrophe?

For Universe's sake..."do the right thing" and shut these things down.
