### General Comment

I am commenting on the consideraton of Environmental Impacts of Temporary Storage of Spent fuel After Cessation of Reactor operation.

Unfortunately, there is no safe way to store atomic waste.,its effects on the environment will be here long after first, second and even third generations walk on this earth. I believe we need to invest in cleaner fuels: wind power, solar panels,etc.

There must be some way to finance these projects even though the United States economy isn't at its best. This country has been through worse times, and a cleaner environment is worth fighting for. After all, we are Americans and we definitely have "the right stuff.:

Thank you for your time,  
 Peace to you in the New Year
