Rockville, MD 20852

Gentlemen:

Subject: SUB-526
Docket No. 40-3392

We have enclosed six (6) copies of our Facility Effluent Report representing the period of July 1, 2012, through December 31, 2012.

Sincerely,

 FOR LARRY SMITH

Larry A. Smith
Plant Manager

Enclosure: Facility Effluent Report (6)

cc: ALARA Committee – L. Smith, J. Smith, J. Pritchett, J. Cybulski, J. King, L. Litinski,
R. Stokes, M. Wolf, M. Abel, R. Lindberg

U.S. Nuclear Regulatory Commission – Region II

FACILITY EFFLUENT REPORT

TYPE OF FACILITY:

UF6 Conversion

LICENSE:

Source Materials No. SUB-526

Docket No. 40-3392

FACILITY ADDRESS:

Honeywell – Metropolis Works

P.O. Box 430

Metropolis, IL 62960

REPORTING PERIOD:

July 1, 2012 – December 31, 2012

GASEOUS EFFLUENTS:

1. The average release rate for the reporting period = 5.5E+05 ACFM.
2. The principle radionuclides released are particulate, oxides and fluorides as follows:

<u>July 1 – December 31, 2012</u>		
Uranium (Nat.)	=	1.18E-02 curies (measured)
Ra ²²⁶	=	5.70E-06 curies (Note 1)
Th ²³⁰	=	3.06E-05 curies (Note 1)

LIQUID EFFLUENTS: (Note 2)

1. The average release rate for the reporting period = 1144 GPM.
2. The principle radionuclides released are as follows:

Uranium (Nat.)	=	1.83E-01 curies (measured)
Ra ²²⁶	=	1.09E-03 curies (measured)
Th ²³⁰	=	1.06E-03 curies (measured)

NOTE 1: Calculated from measured Th²³⁰ and Ra²²⁶ content of the various types of ore concentrates present in the process area during the reporting period. As the ratio from exit points of these nuclides to uranium is assumed to be the same as in the concentrates, this calculation results in conservative (high) reported quantities.

NOTE 2: Quantities include stormwater effluent discharge.
