I may need some additional information since the information on the e-mail refers to some attachments as Appendices that I do not see. Also you will be required to do annual audits of your program since this is in the regulations 10 CFR 20.1101(c). You will need to be specific about the facilities for storage and use. Identify rooms and provide a simple drawing of the layout. I have not completed my review but just noticed these issues up front. It is true that if you get the license you could amend it to add any of the registered devices.

Thanks, please let me know if there is anything else you need. I did fax those sheets as well.

The reason that I called yesterday is that the person I am supposed to get the probe from (The probe is currently on a New York State license) is getting a lot of pressure from NYS to get rid of their probe. I believe their license has expired and they are paying late fees, but the state is still pressuring them.

I called because I wanted to see if there was any way to expedite our application but I spoke to Todd Jackson, who informed me that the NRC will need to come out for a site visit, so that is not possible.

Therefore I may not get that probe, but I have another probe that I am trying to get from another site...if I end up getting that one instead can I just make an amendment to the application with the info from that probe.

THanks

John

Sorry I was out of the office and just received your e-mail today. I will need to look into if our admin staff made an error and missed placing these documents into the your electronic folder or maybe you never attached them but never the less I will now look over what you provided. You should send these additionally as a fax to 610 337-5269 and refer to MC 579878, if you have not, because e-mails are not considered official correspondence.

Thank you.

Attached are two pages that I believe were submitted with the original application, detailing the use for the probe in animals and the facilities. I put a box around those areas. IT is possible, based on your request that these were not in the copy that was sent to you.

Other than that all of the other information in NUREG 1556 Vol7 Appendix H mostly does not refer to sealed sources.

Let me know if there is anything else I need to do to expedite this thanks

I completed a preliminary review of your application dated 1/21/2012 and noted you have not provided any specific information defining what you would like to be authorized to do and what facilities and procedures will apply. Please review NUREG-1556, Vol. 7 (Appendix H) and provide sufficient information for us to evaluate your request. I may be reached at 610 337-5303. Please refer to Mail Control No. 579878 when replying.

Thank you.
