Philadelphia, PA, 19136

## General Comment

Dear Commissioners,

This letter extends my previous comments without in any way reducing my stands. Fukushima #3 has been producing information daily which in great part has been blocked by various authorities. I respectfully request that the NRC extends the deadline for comments until and unless we know that we will able to handle radwaste from a Fukushima type accident within these United States. The amount of radiation has increased immensely which is loosed upon the United States. The amount of radiation is comparable to radiation at the advent in the history of the Earth when radiation was so great as to endanger the evolution of life.

I respectfully request as follows: the danger of radioactive wastes has reached the point to endanger beneficial evolution. Ending beneficial evolution on this Earth could make the human race into an endangered species. I respectfully urge the NRC to investigate the danger posed by adding the amounts of radiation in radwastes to the biosphere. This investigation would meet the requirements of the Endangered Species Act.

Respectfully submitted,

Marvin I. Lewis
