SUBJECT: ANNUAL ASSESSMENT LETTER FOR DIABLO CANYON POWER PLANT  
UNITS 1 AND 2 (REPORT 05000275/2012801 AND 05000323/2012801)

Dear Mr. Halpin:

On February 12, 2013, the NRC completed its end-of-cycle performance review of Diablo Canyon Power Plant, Units 1 and 2. The NRC reviewed the most recent quarterly performance indicators (PIs) in addition to inspection results and enforcement actions from January 1, 2012, through December 31, 2012. This letter informs you of the NRC's assessment of your facility during this period and its plans for future inspections at your facility.

The NRC determined that overall, Diablo Canyon Power Plant, Units 1 and 2 operated in a manner that preserved public health and safety and met all cornerstone objectives. The NRC determined the performance at Diablo Canyon Power Plant, Units 1 and 2 during the most recent quarter was within the Licensee Response Column of the NRC's Reactor Oversight Process (ROP) Action Matrix because all inspection findings had very low (i.e., green) safety significance, and all PIs indicated that your performance was within the nominal, expected range (i.e., green). Therefore, the NRC plans to conduct ROP baseline inspections at your facility.

The NRC determined that a cross-cutting theme in the human performance decision-making component initially identified during the Mid-cycle 2012 Assessment continued to exist. Specifically, four findings were identified during the assessment period that had primary causal factors involving the failure to use conservative assumptions in decision-making such that licensee decisions demonstrate that nuclear safety is an overriding priority [H.1(b)]. The NRC has determined that a substantive cross-cutting issue associated with H.1(b) does not exist because the NRC does not have a concern with your staff's scope of effort and progress in addressing the cross-cutting theme. We recognize that you have completed an apparent cause evaluation and a root cause analysis, and have implemented corrective actions for the identified common causes. The NRC will continue to monitor your staff's effort and progress in addressing the theme until the theme criteria are no longer met.

The enclosed inspection plan lists the inspections scheduled through June 30, 2014. Routine inspections performed by resident inspectors are not included in the inspection plan. The inspections listed during the last nine months of the inspection plan are tentative and may be revised at the mid-cycle performance review. The NRC provides the inspection plan to allow for the resolution of any scheduling conflicts and personnel availability issues. The NRC will contact you as soon as possible to discuss changes to the inspection plan should circumstances warrant any changes. This inspection plan does not include security-related inspections, which will be sent via separate, non-public available correspondence.

From January 1 to December 31, 2012, the NRC issued one Severity Level III and two Severity Level IV traditional enforcement violations associated with Green findings. The NRC considered whether to conduct Inspection Procedure 92723, "Follow-Up Inspection for Three or More Severity Level IV Traditional Enforcement Violations in the Same Area in a 12-Month Period." Because the actual violations occurred over a 9-year period, we have concluded that these three violations do not represent a current performance trend. Therefore, we will review these violations during normal baseline inspections and do not plan to conduct a separate review.

In accordance with 10 CFR 2.390 of the NRC's Rules of Practice, a copy of this letter will be available electronically for public inspection in the NRC Public Document Room or from the Publicly Available Records (PARS) component of NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).

Please contact me at 817-200-1141 with any questions you have regarding this letter.

Sincerely,

Neil O'Keefe, Chief  
Project Branch B  
Division of Reactor Projects
