Re: Response to Auditors Review per EA-10-231 Item 2(c)

Mr. Razo

Having received the Internal Audit performed by Jack Marks on the 5<sup>th</sup> of February of this year I am responding to the findings submitted to fulfill Item 2 (c) of EA-10-231.

The annual review of our radiation safety program conducted by Mr. Marks had found an item that I had overlooked in my quarterly audit of our program. The item in the audit titled "materials" found that a wipe test was not completed as it should have been. The source that was due for a wipe test in October was used only one day past the required wipe test period, and after that the camera was kept in storage and not used since. The wipe test has since been performed and the results entered into the log book. I still do not know how this item was missed but I will try harder to maintain an accurate record in the future.

As per our telephone conversation on the 14<sup>th</sup> of this month I explained that I have taken any advice that I have received from these audits as well as past NRC inspections to try and improve our program. Having mentioned some of the items in the meeting in regards to additional barriers, record storage and the public dose assessment, I will continue to monitor and look for additional ways of improving our radiation safety program.

Regards

Donald Millar  
Radiation Safety Officer  
Alaska Industrial X-ray
